01 / The product promise

A free learning journey for DevOps and cloud engineers, with resources and recall in one place.

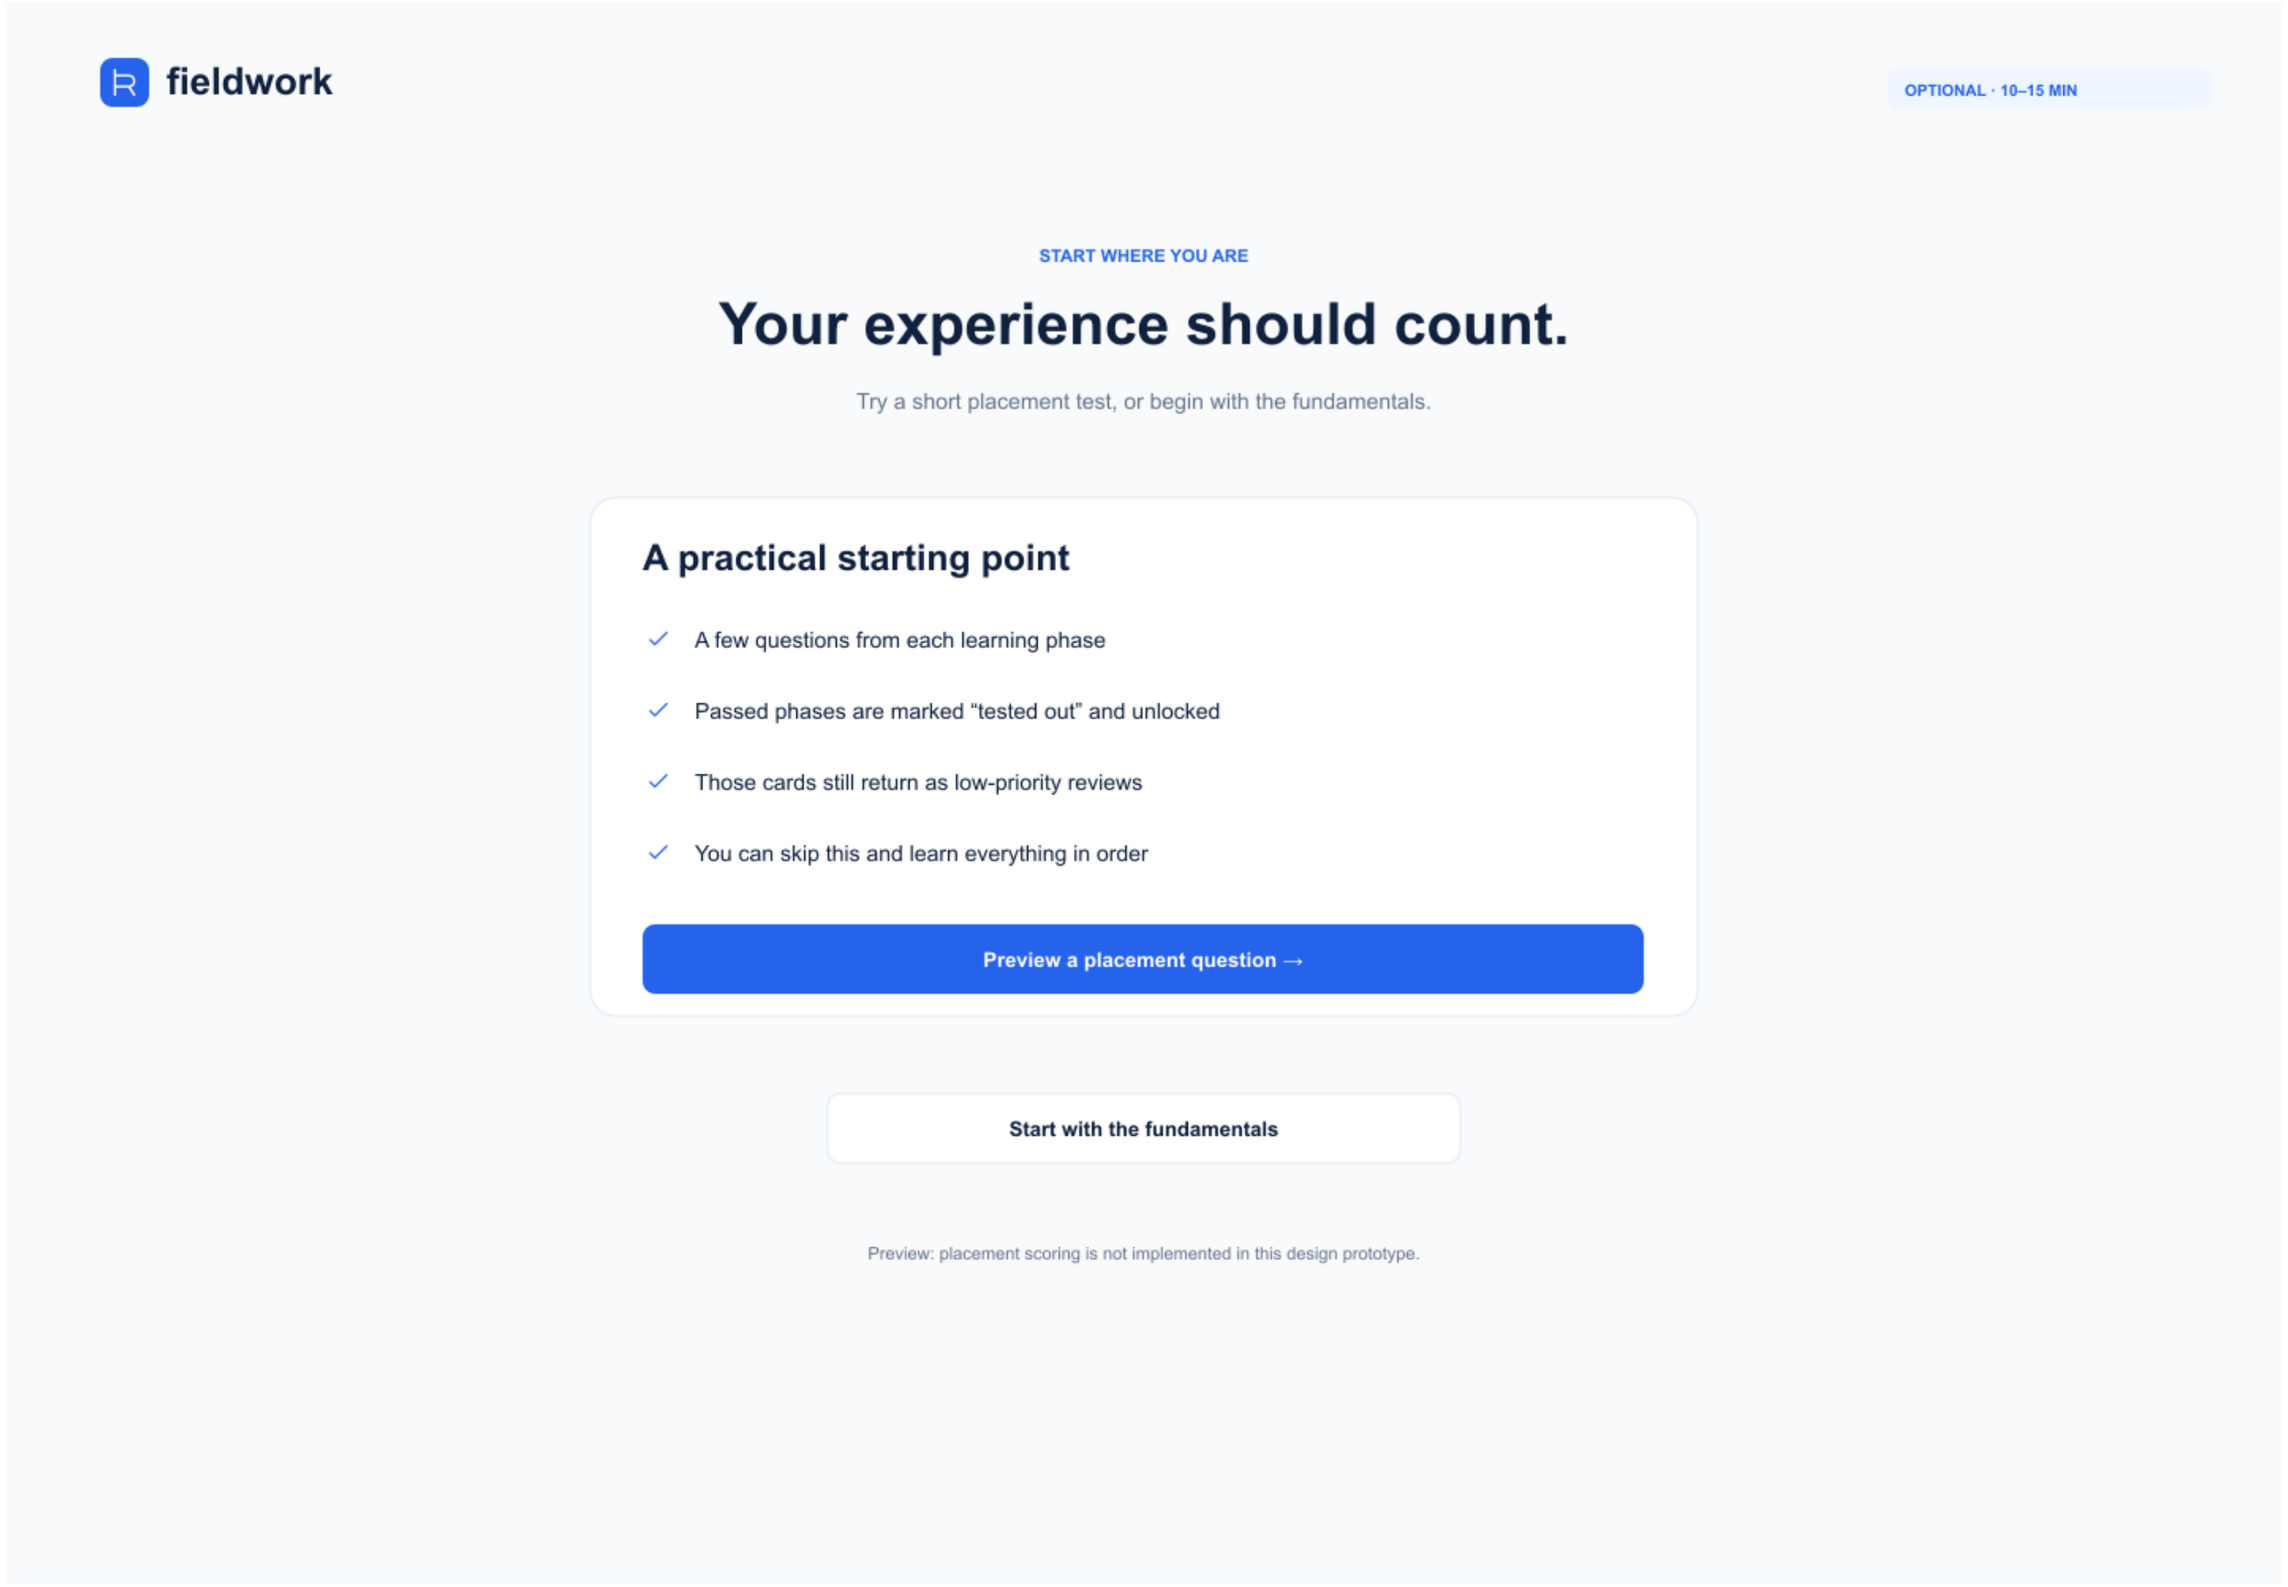

02 / A direction that fits

Choose Learn AI or Become an FDE. Preview a deck without signing in.

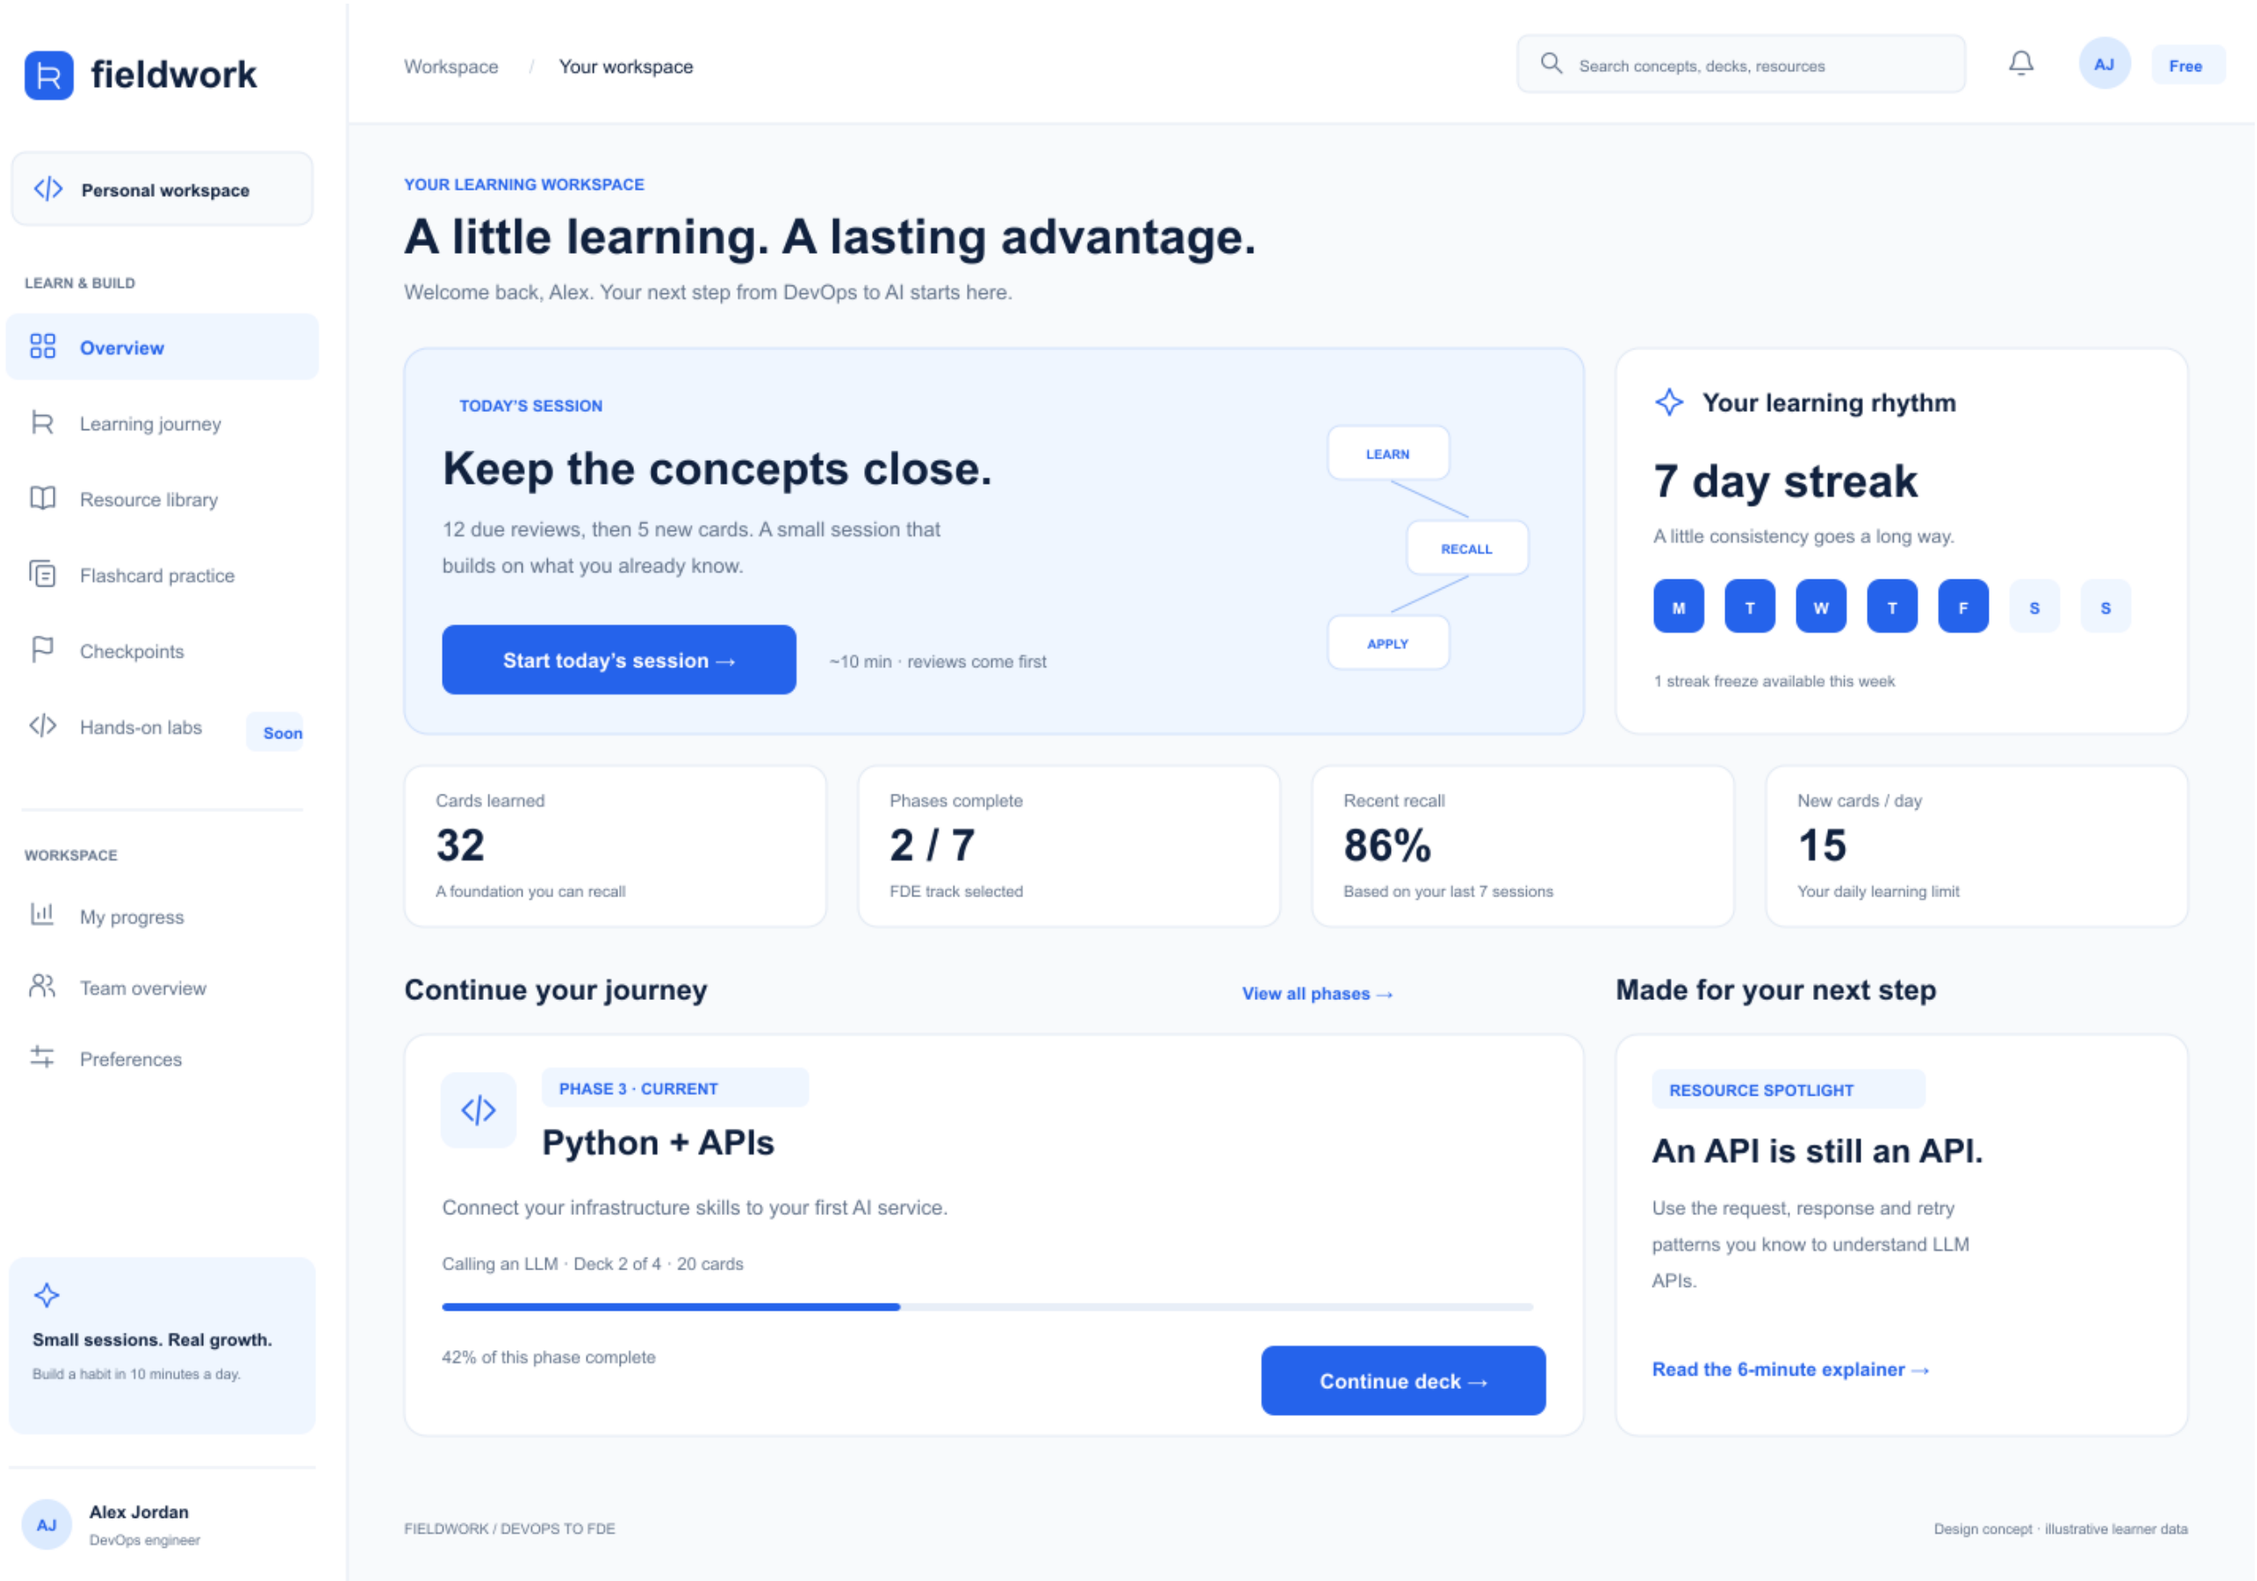

03 / Build on existing experience

Optional placement marks passed phases tested out, while keeping those cards in review.

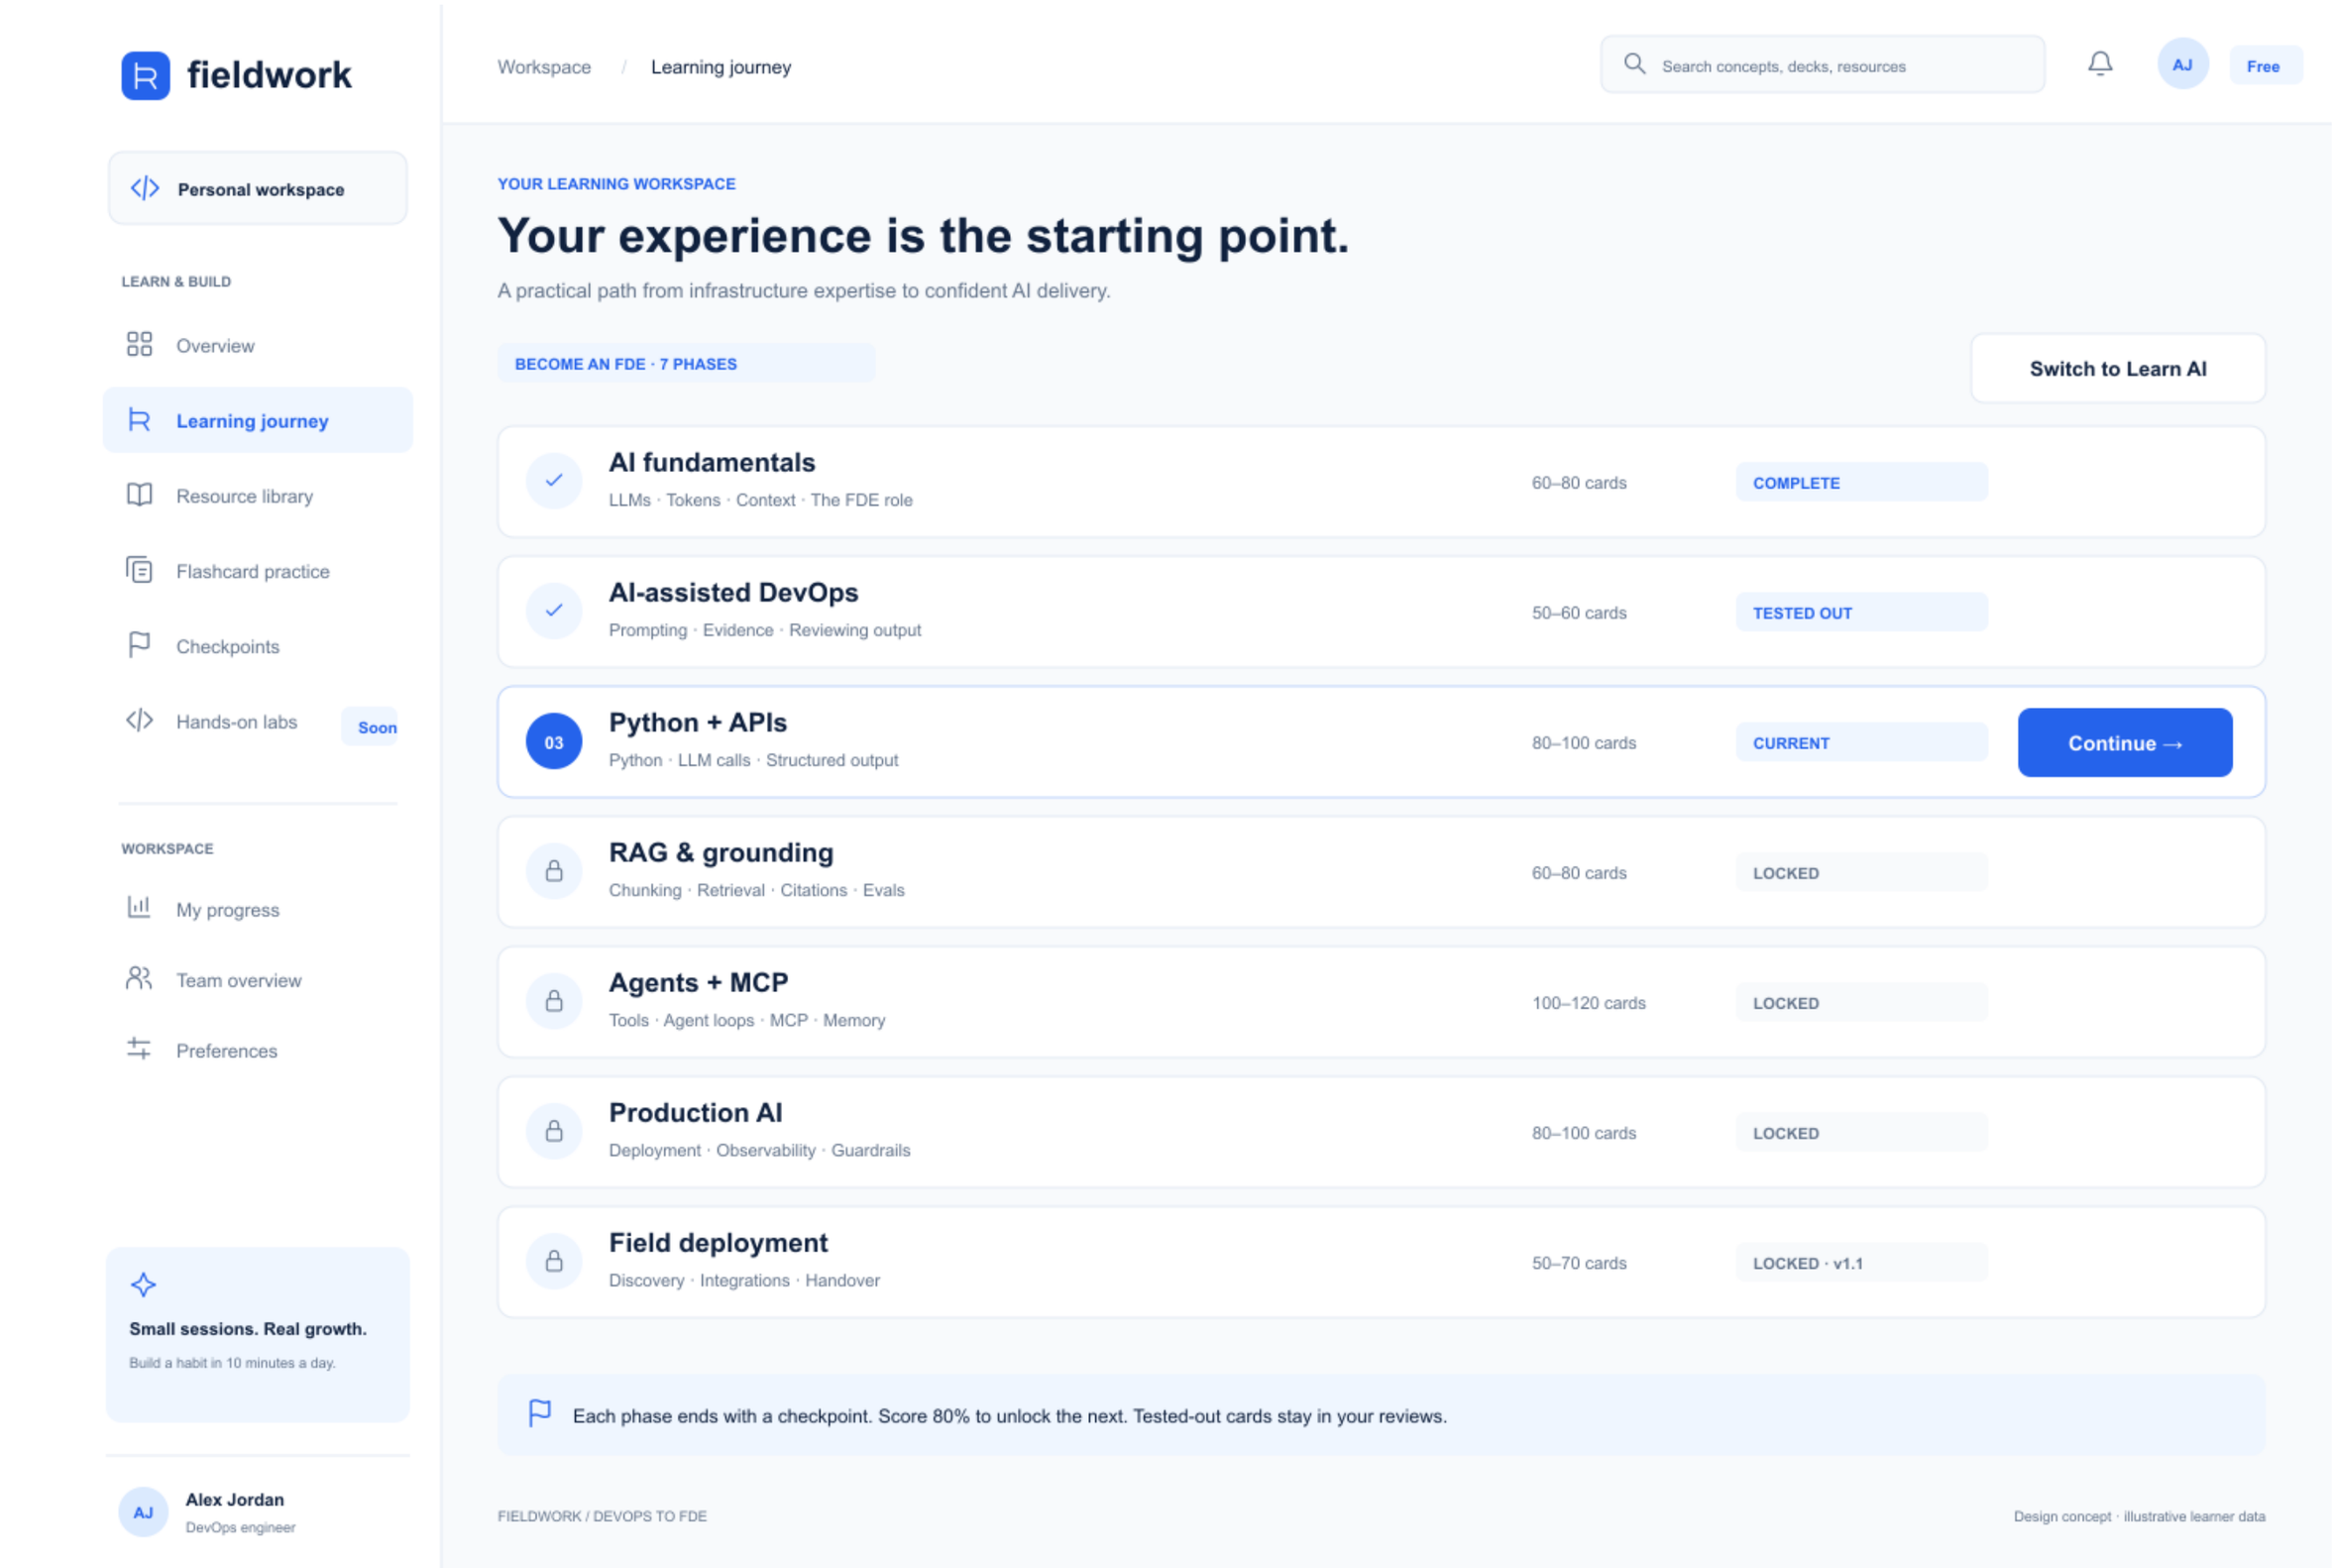

04 / One clear next action

Daily reviews first, then new cards. A small learning habit instead of an overwhelming catalog.

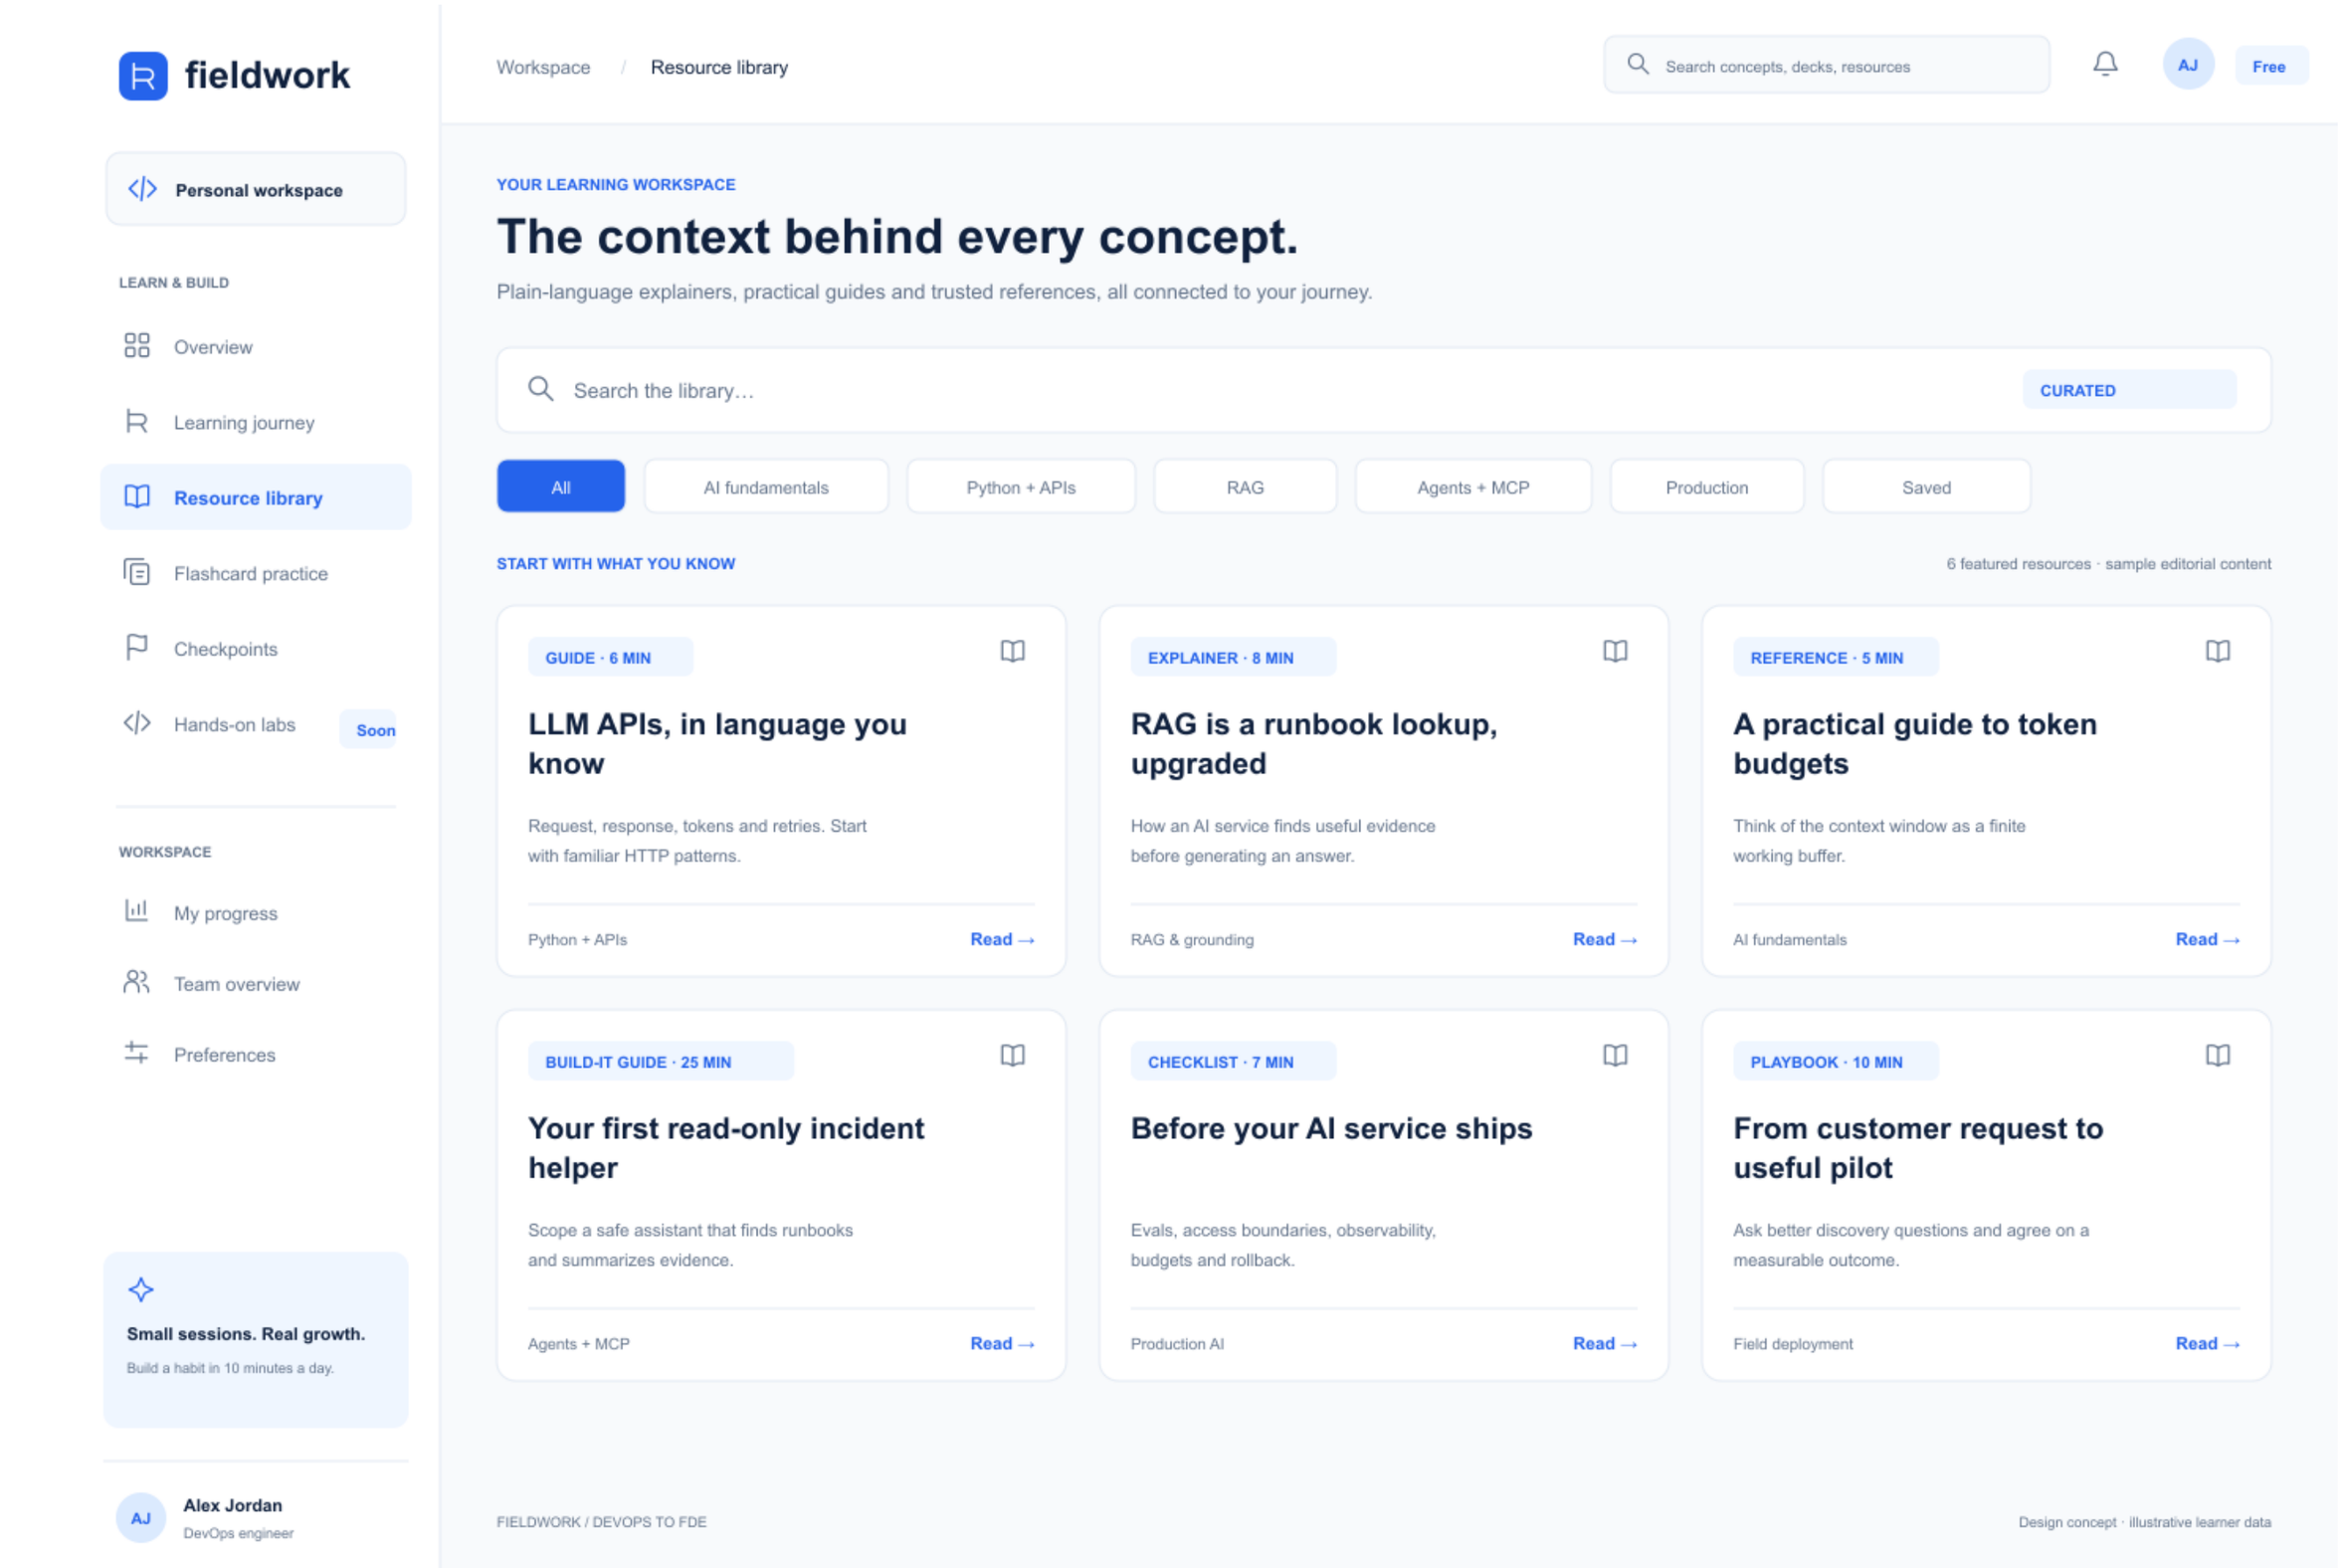

05 / Seven practical phases

Complete, tested-out, current and locked phases. Learn AI shares the first six phases.

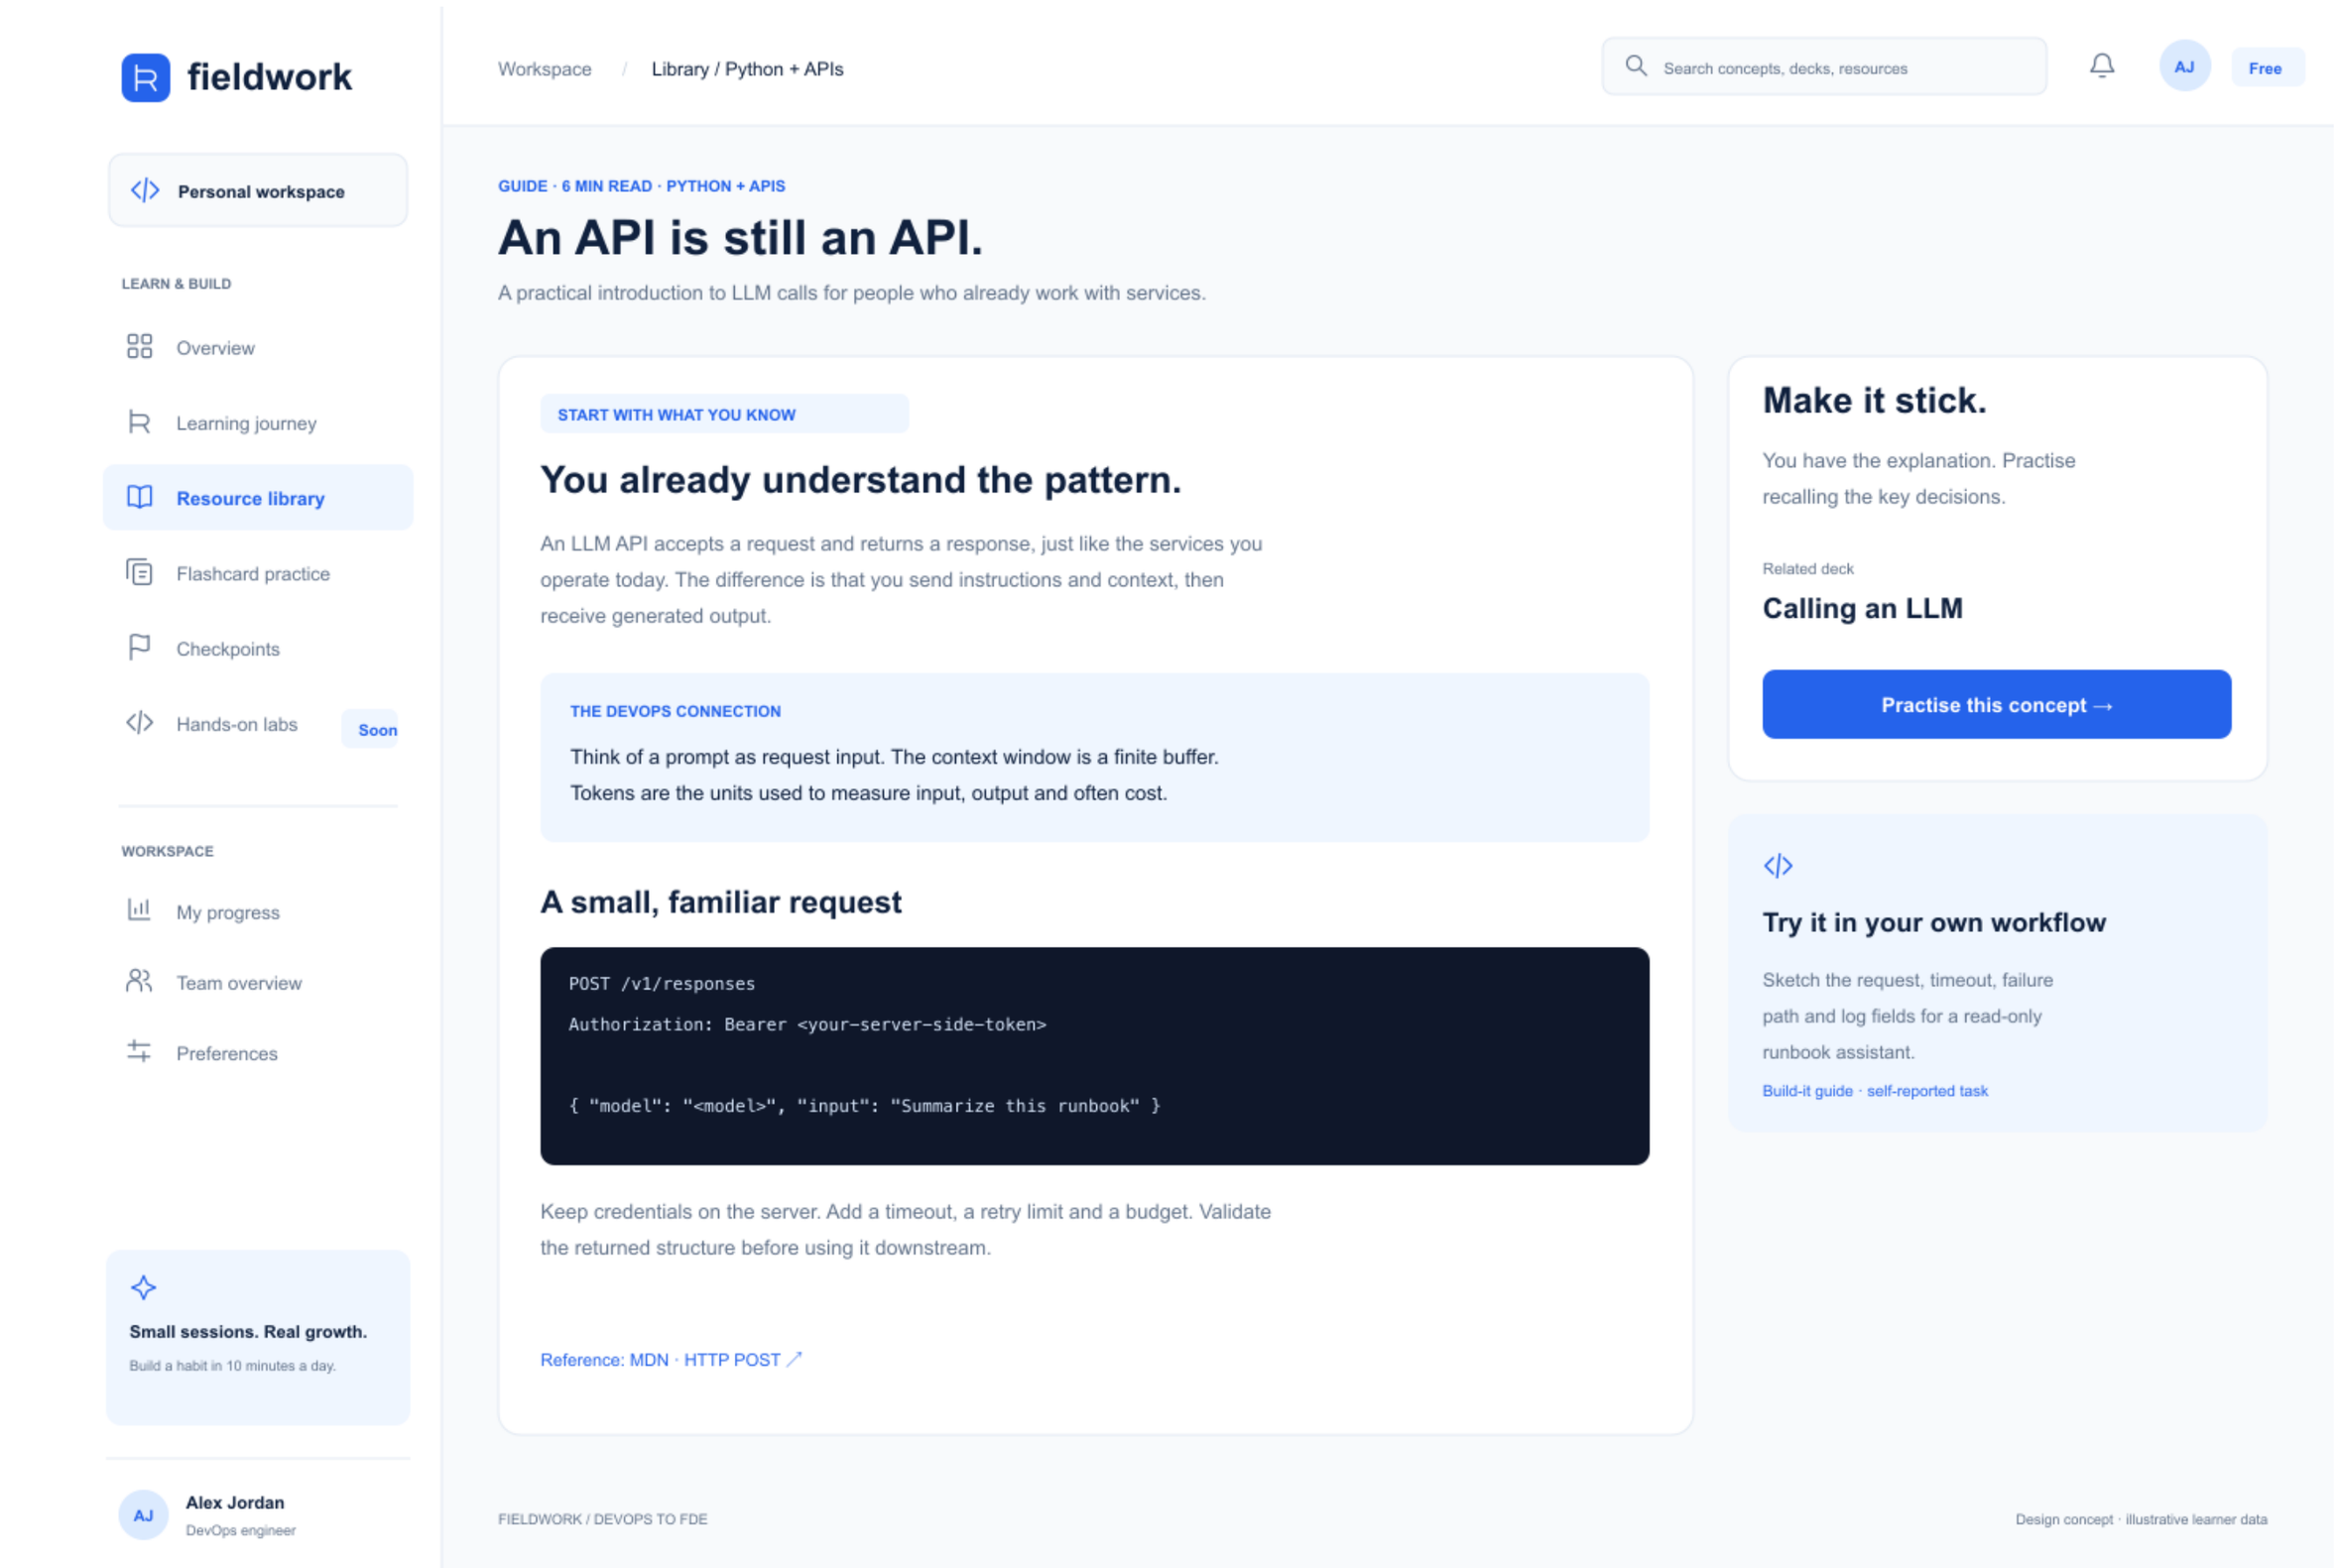

06 / A resource library with context

Plain-language explainers, build-it guides, references and saved resources connected to the journey.

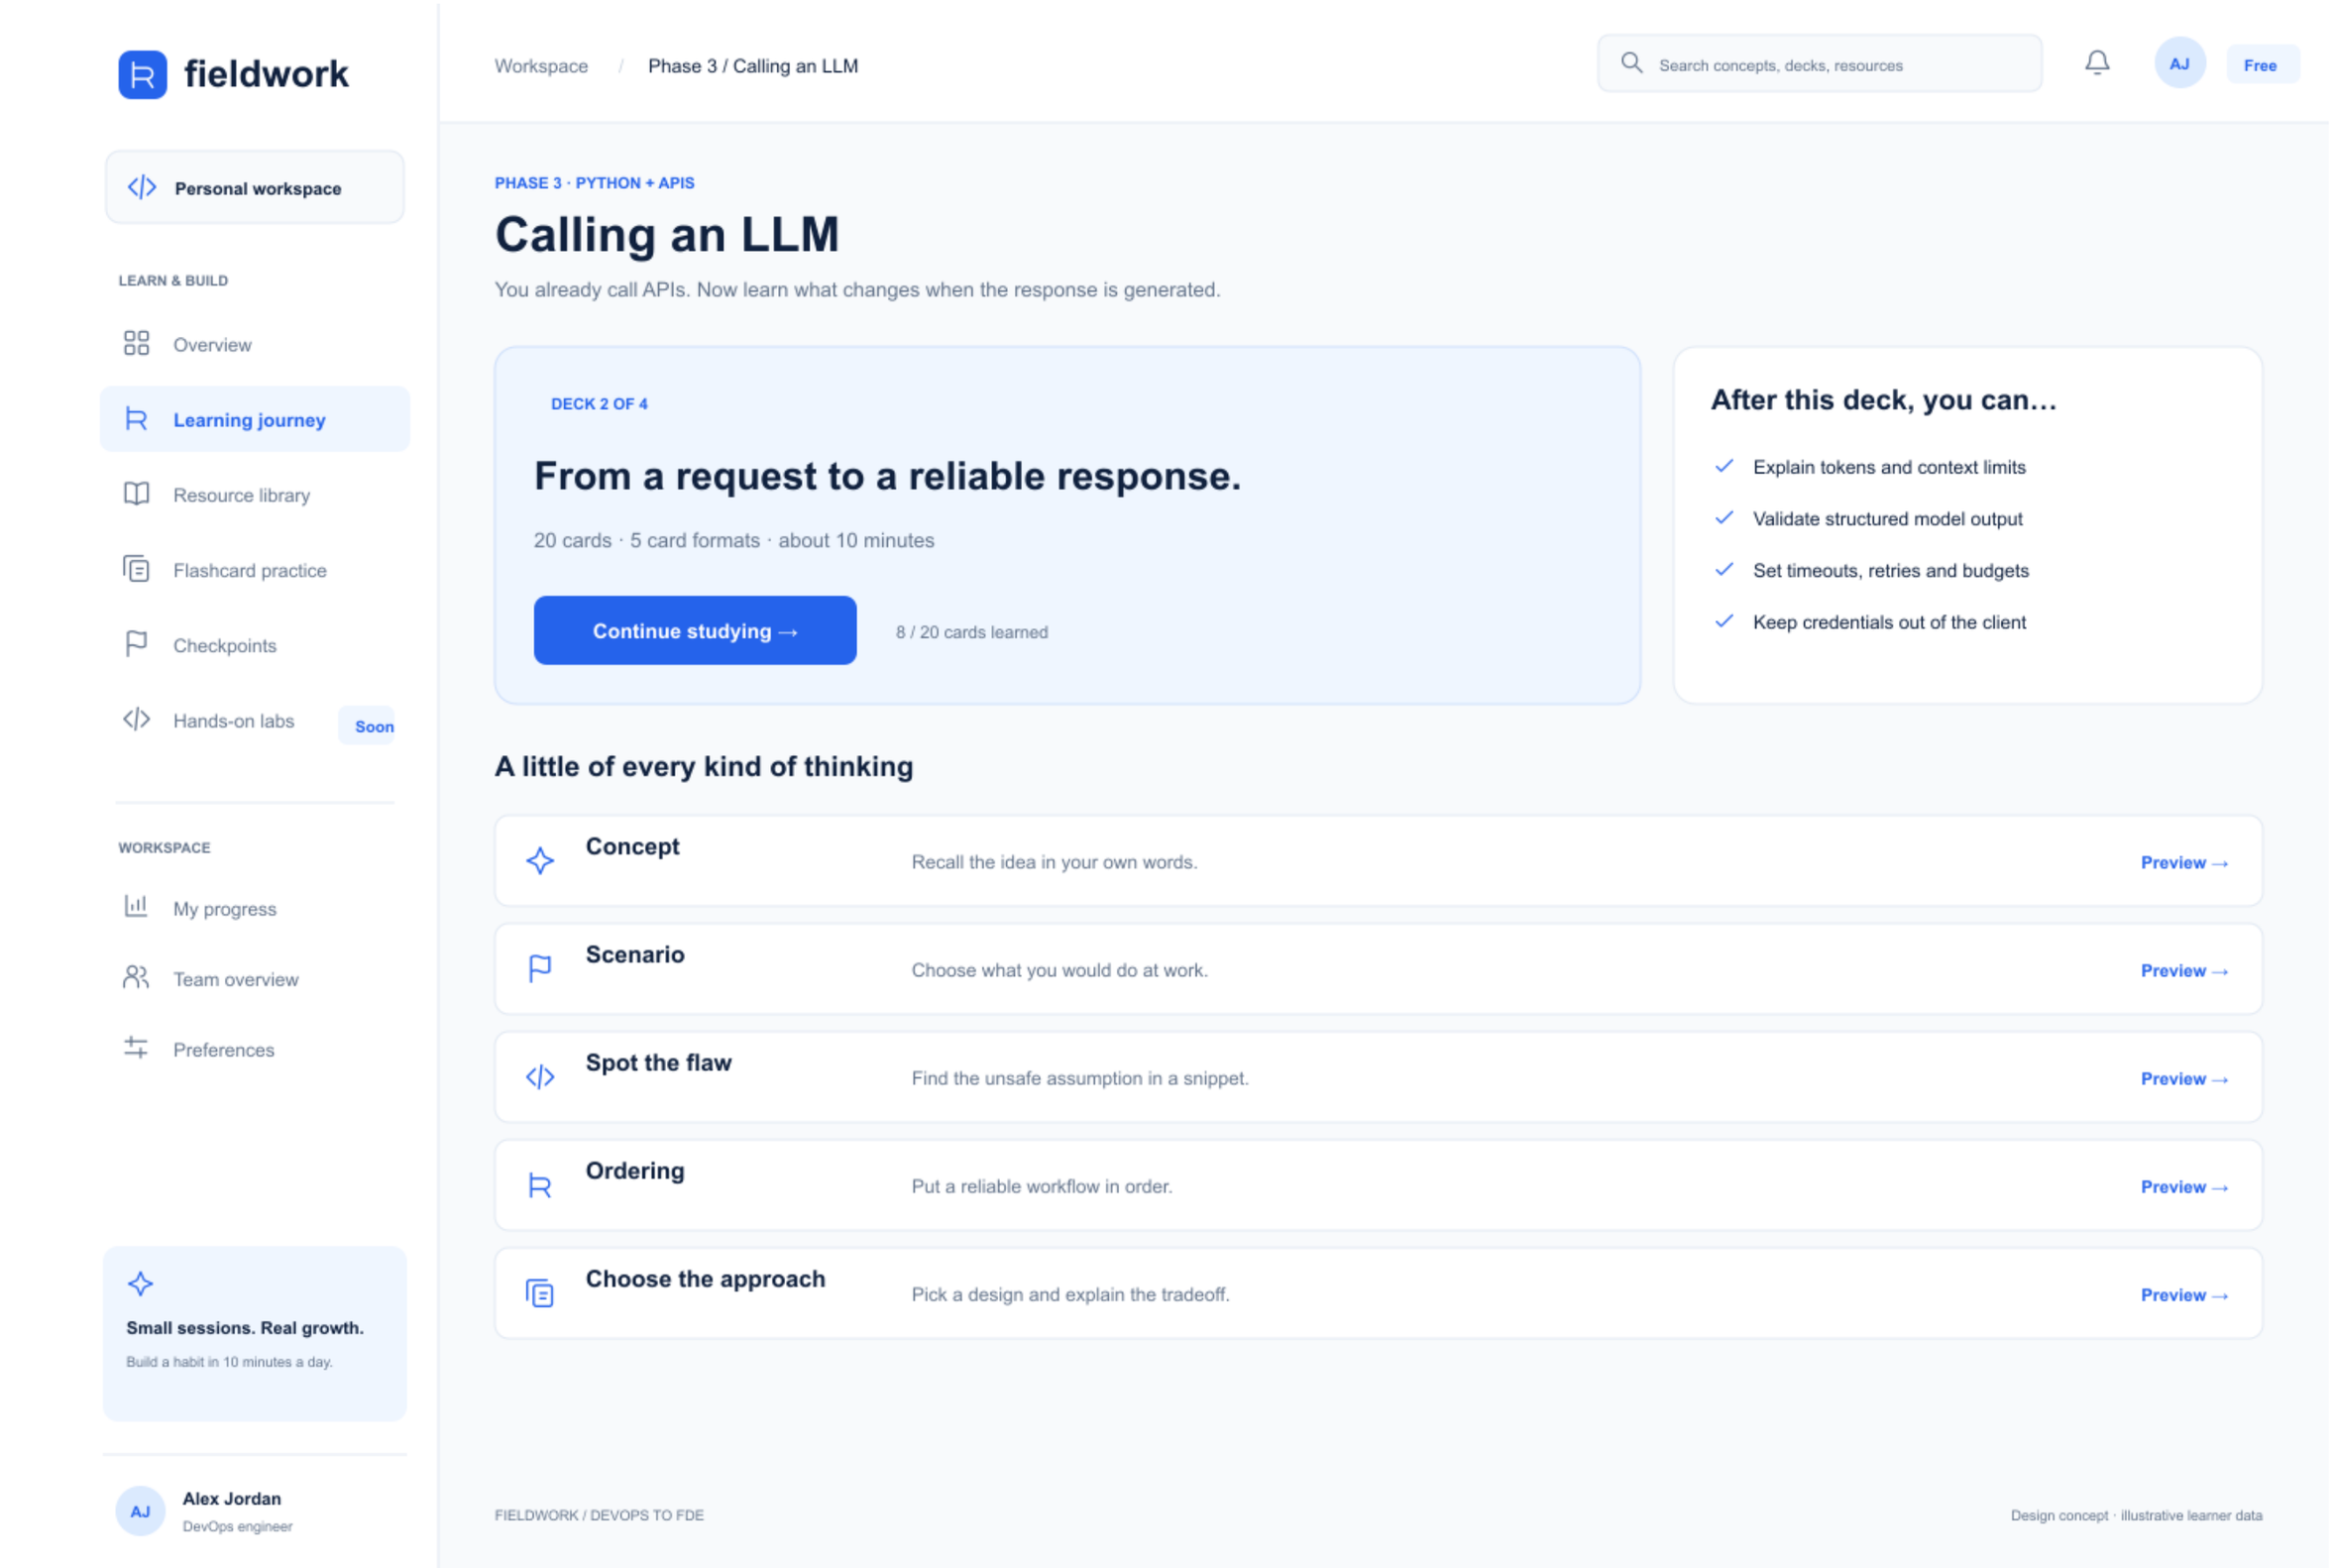

07 / Explain through familiar work

Connect an LLM API to requests, responses, retries and budgets, then practise the concept.

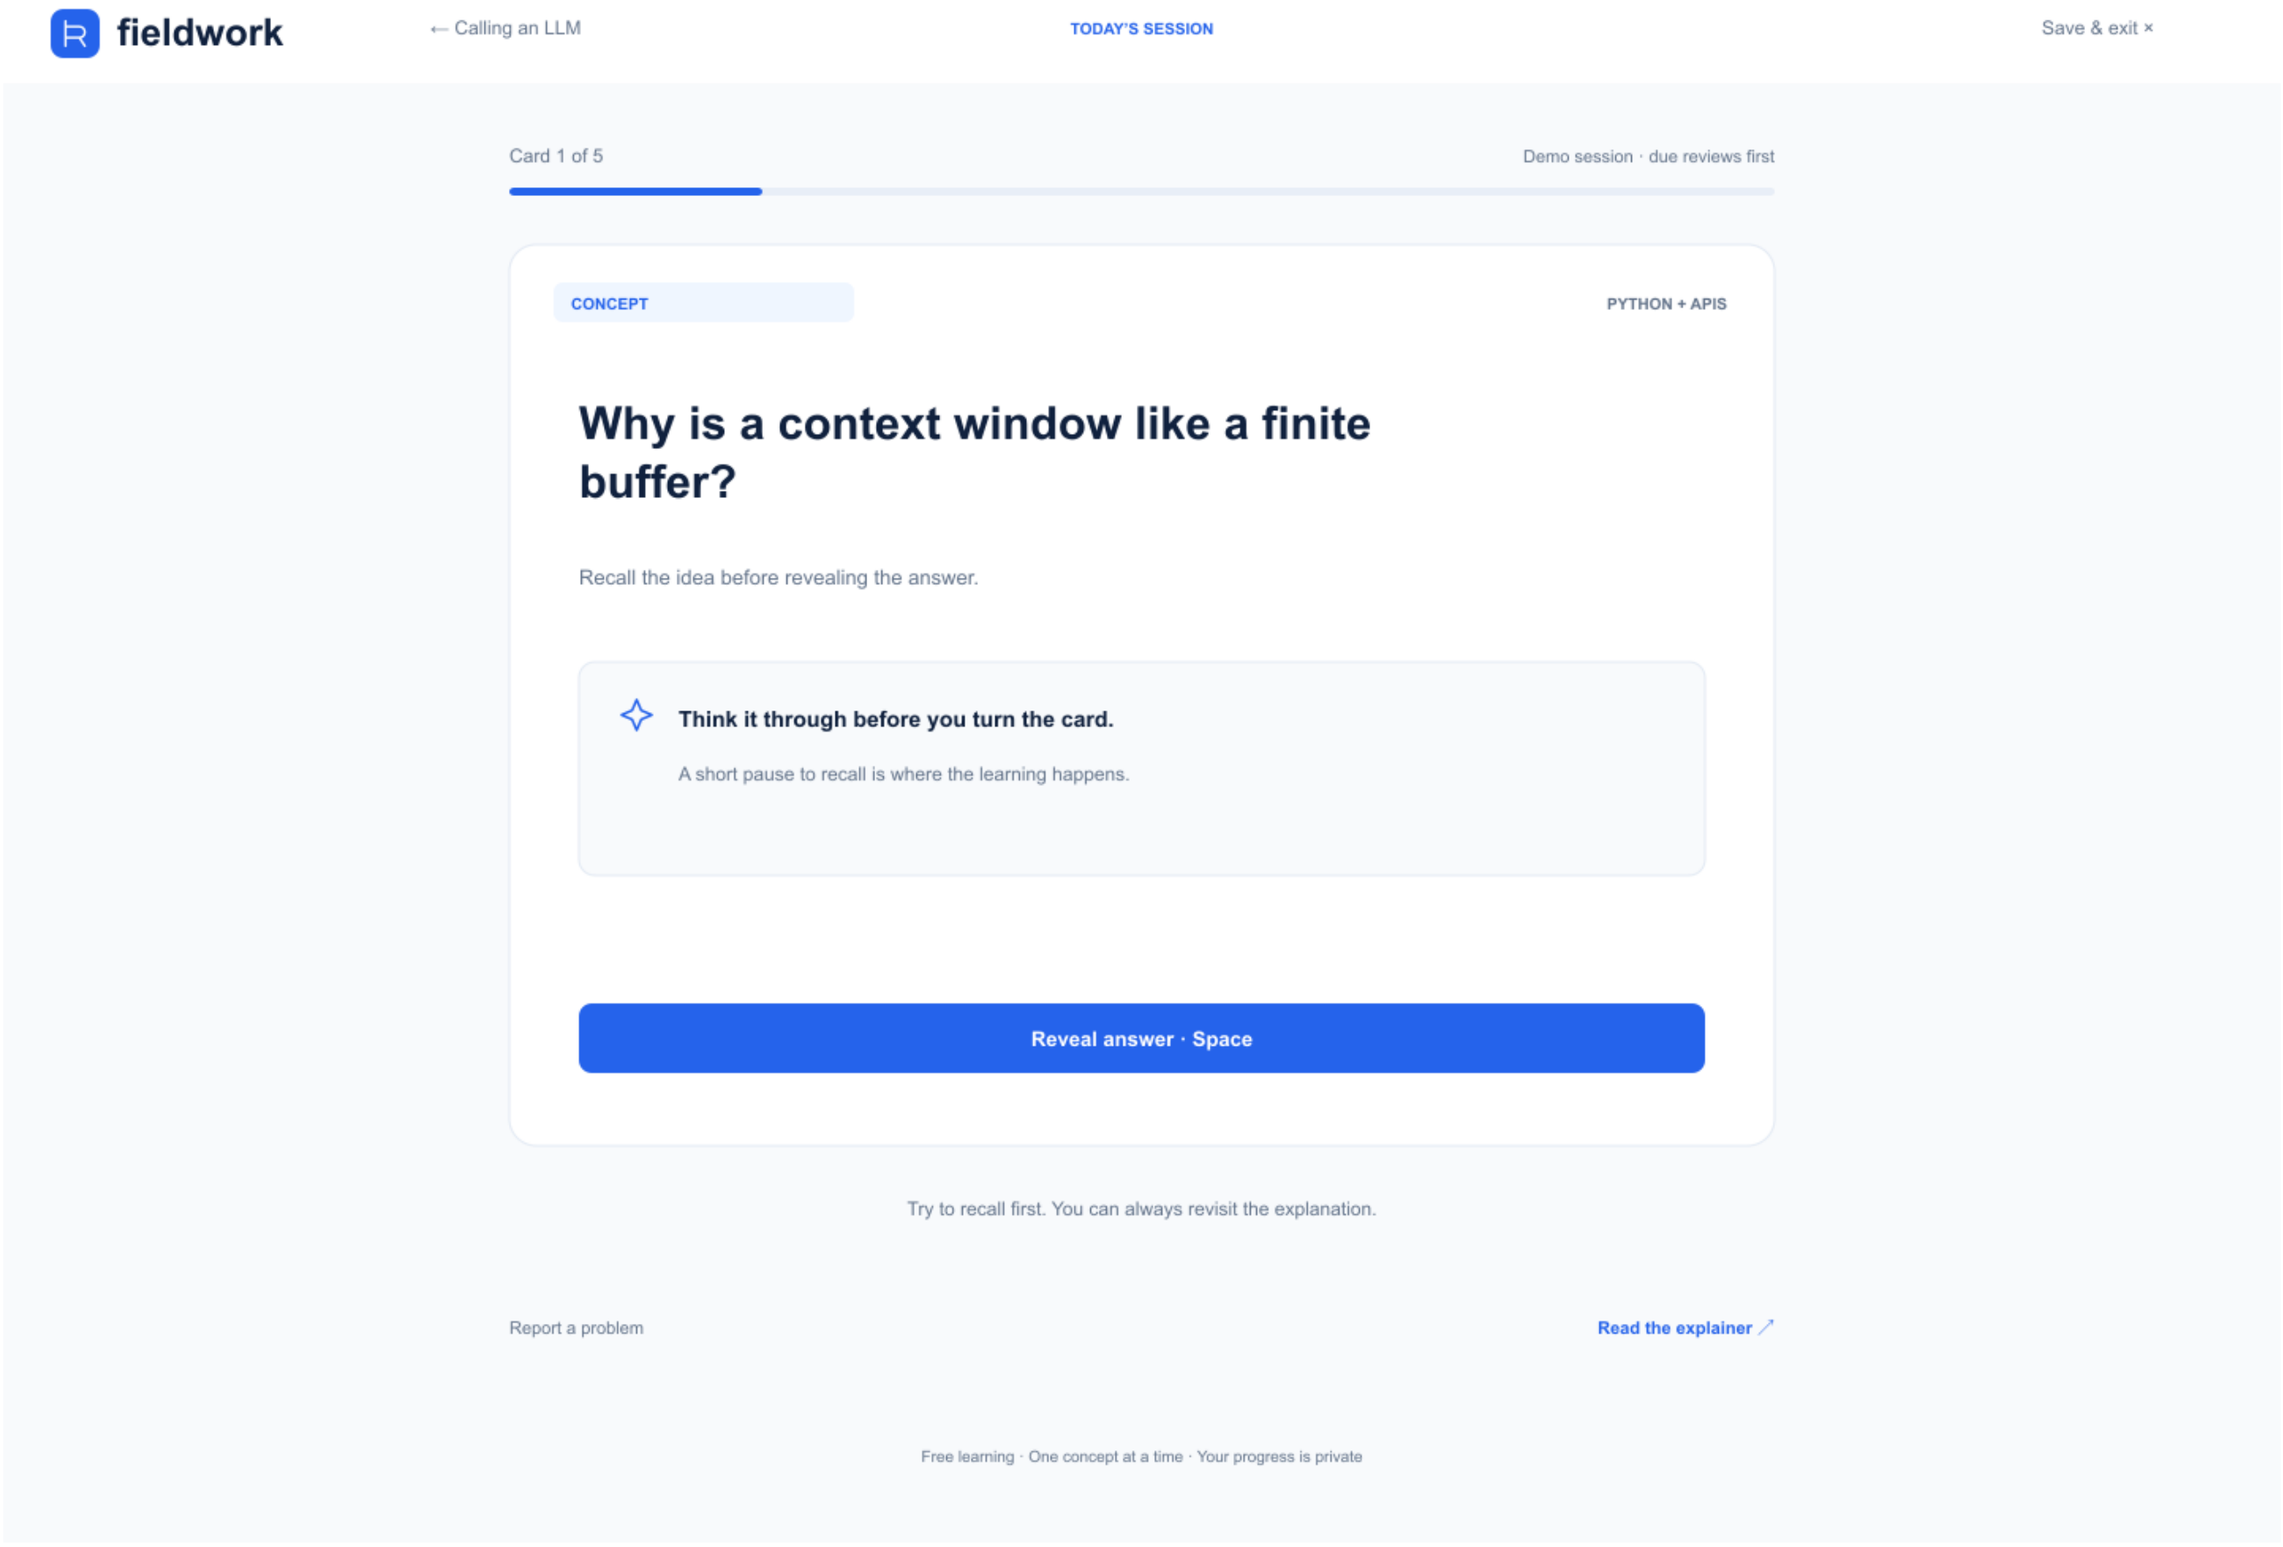

08 / A deck that builds judgment

Short decks bring together concept, scenario, spot-the-flaw, ordering and choice cards.

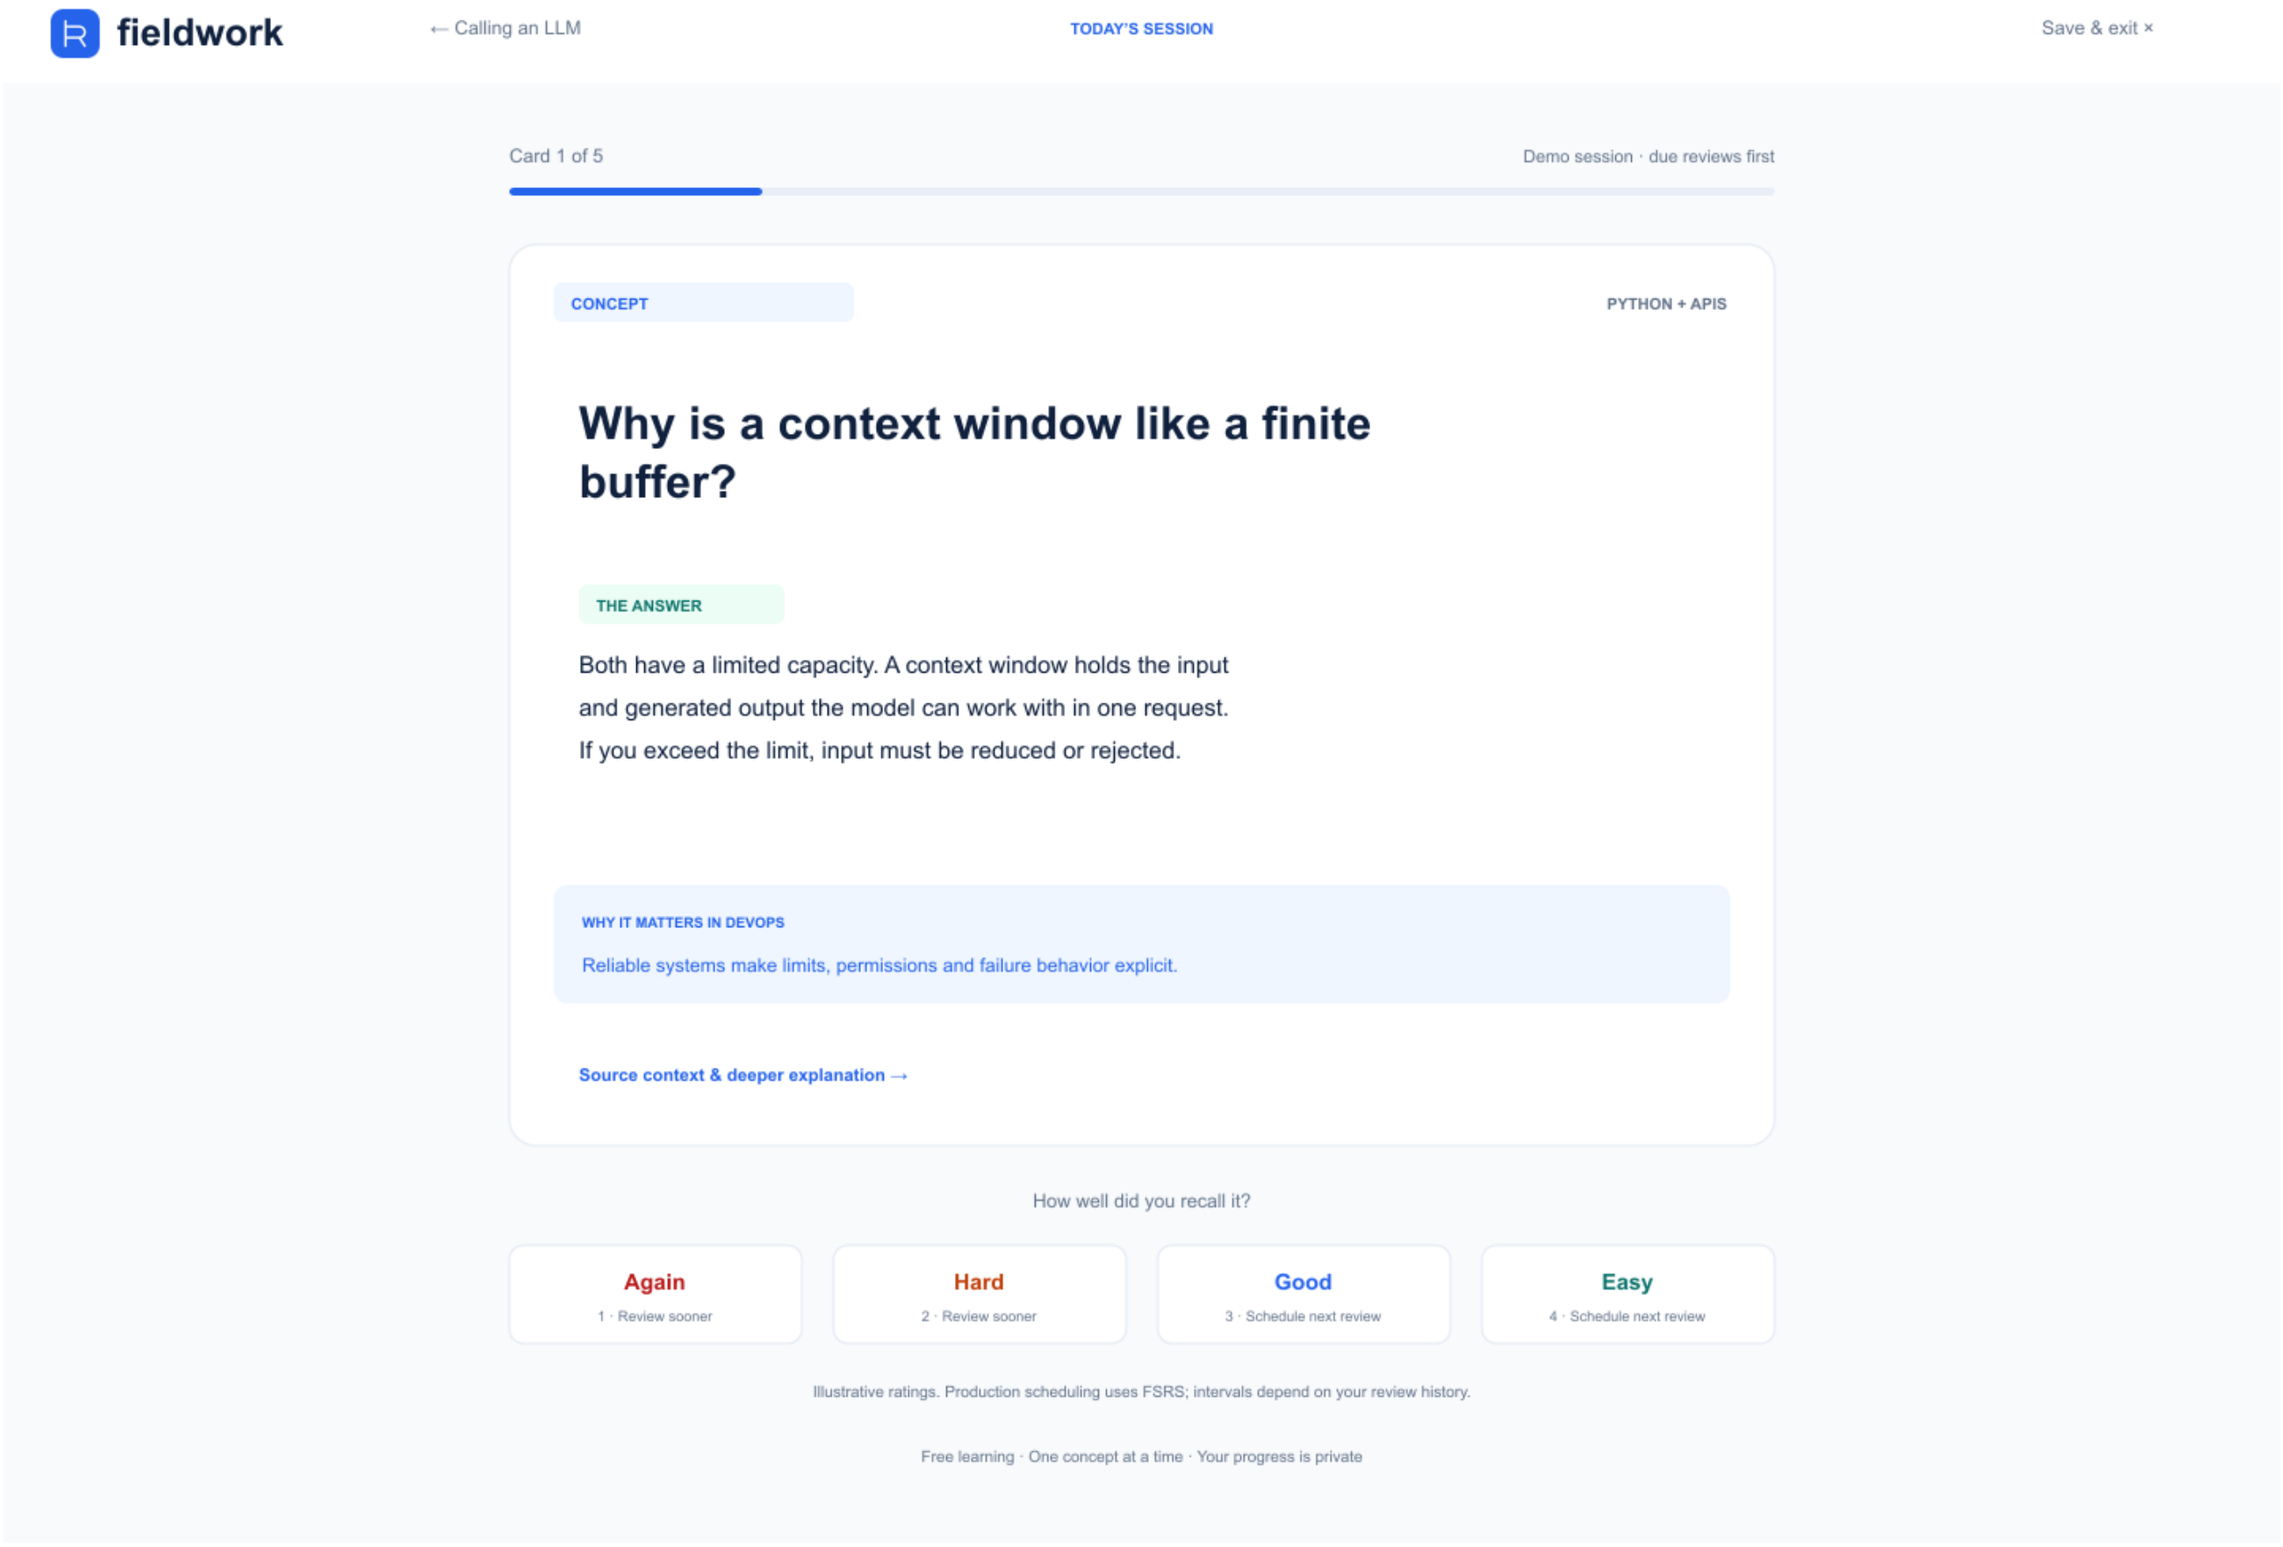

09 / Recall before revealing

One question, readable content, a clear reveal action, source context and problem reporting.

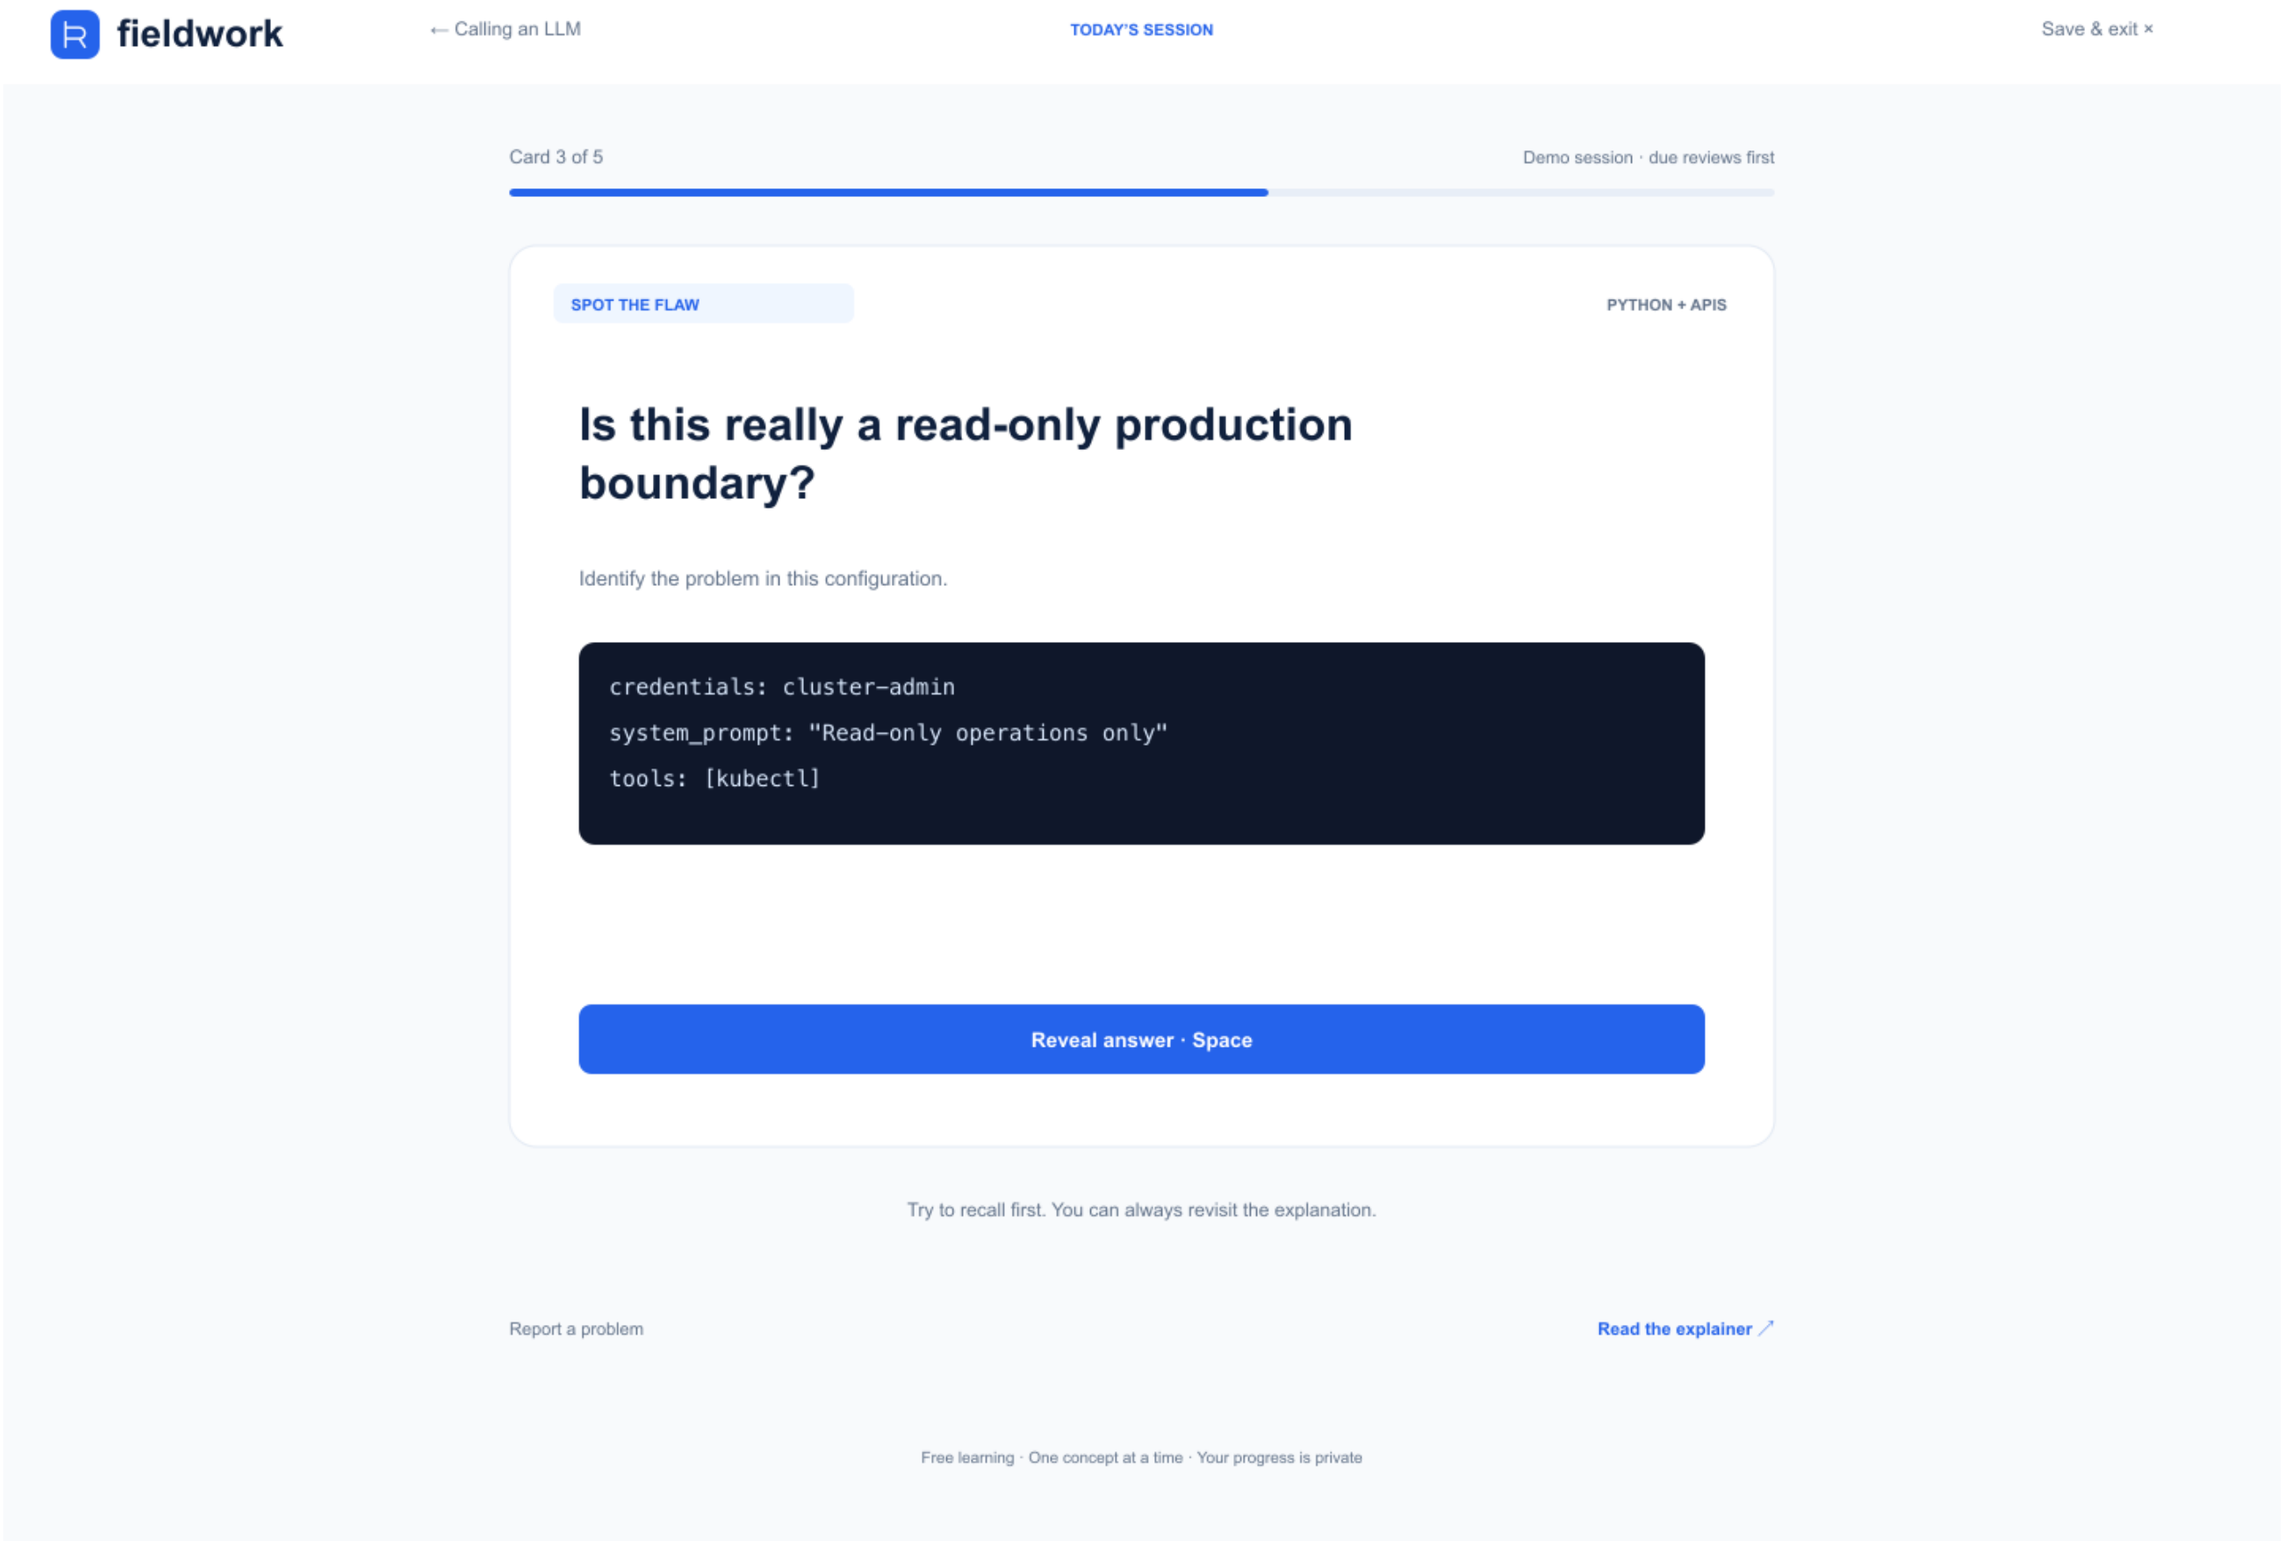

10 / Honest recall feedback

Again, Hard, Good and Easy for self-graded cards. Production scheduling will use FSRS.

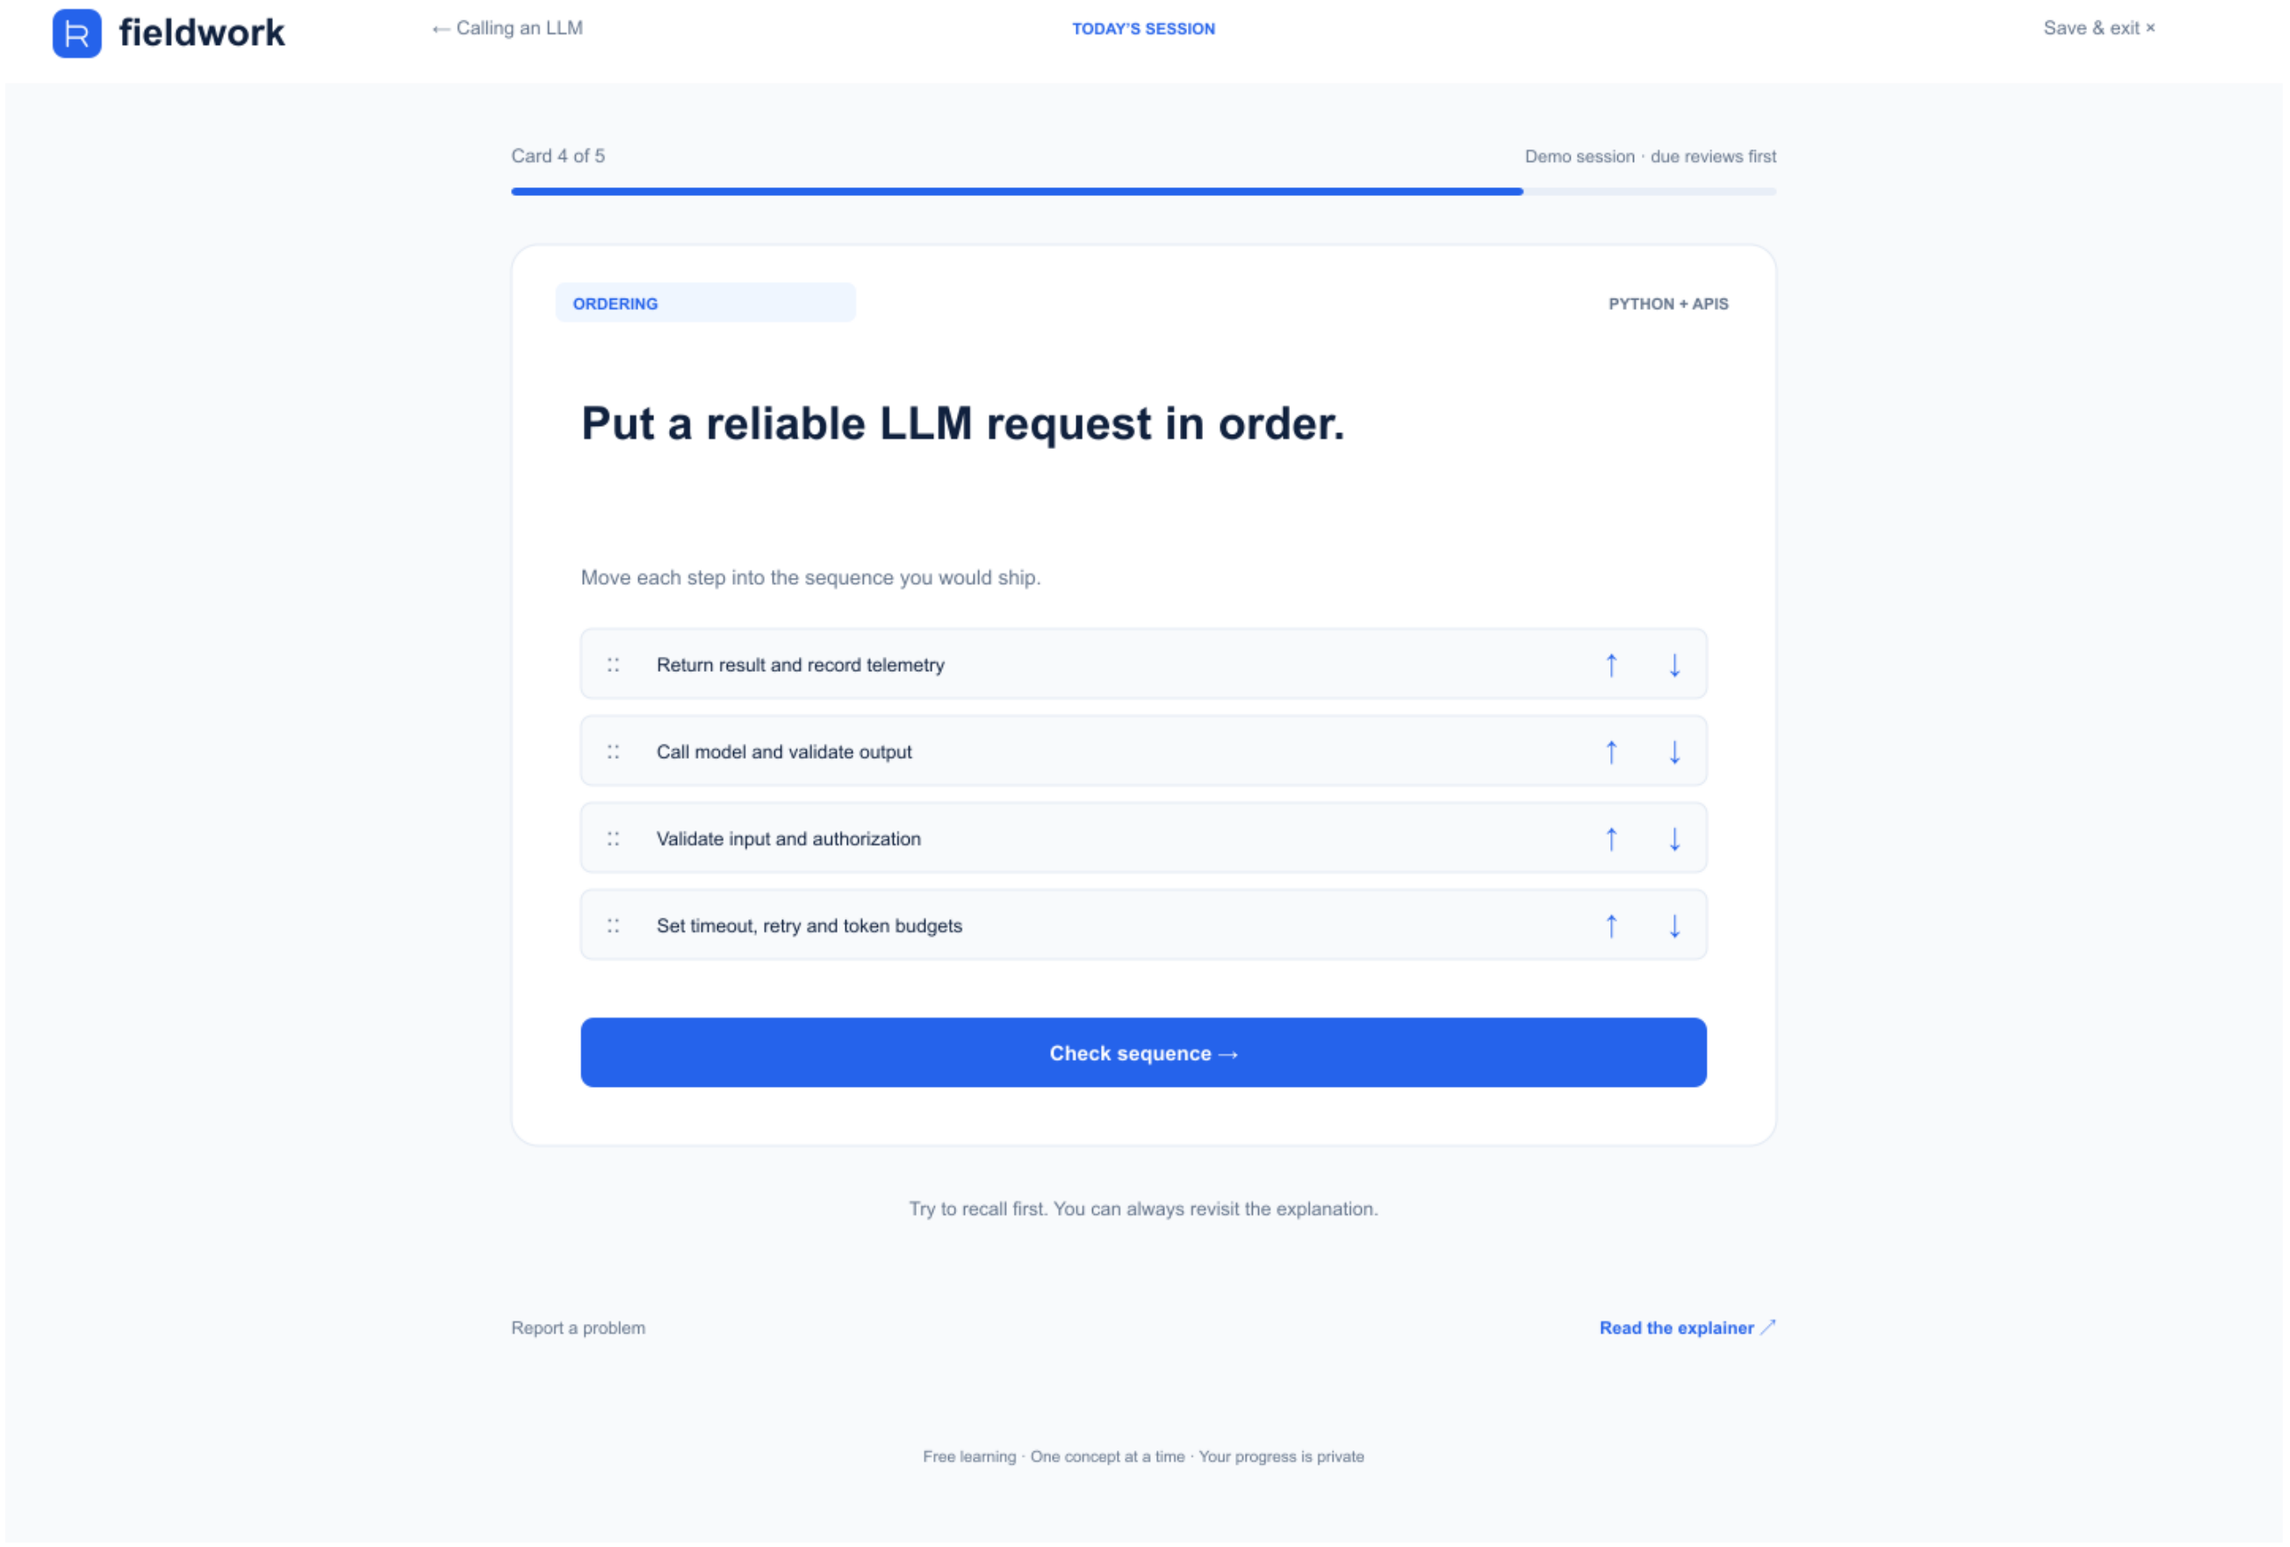

11 / Think like an operator

Use realistic code and config snippets to reveal unsafe assumptions.

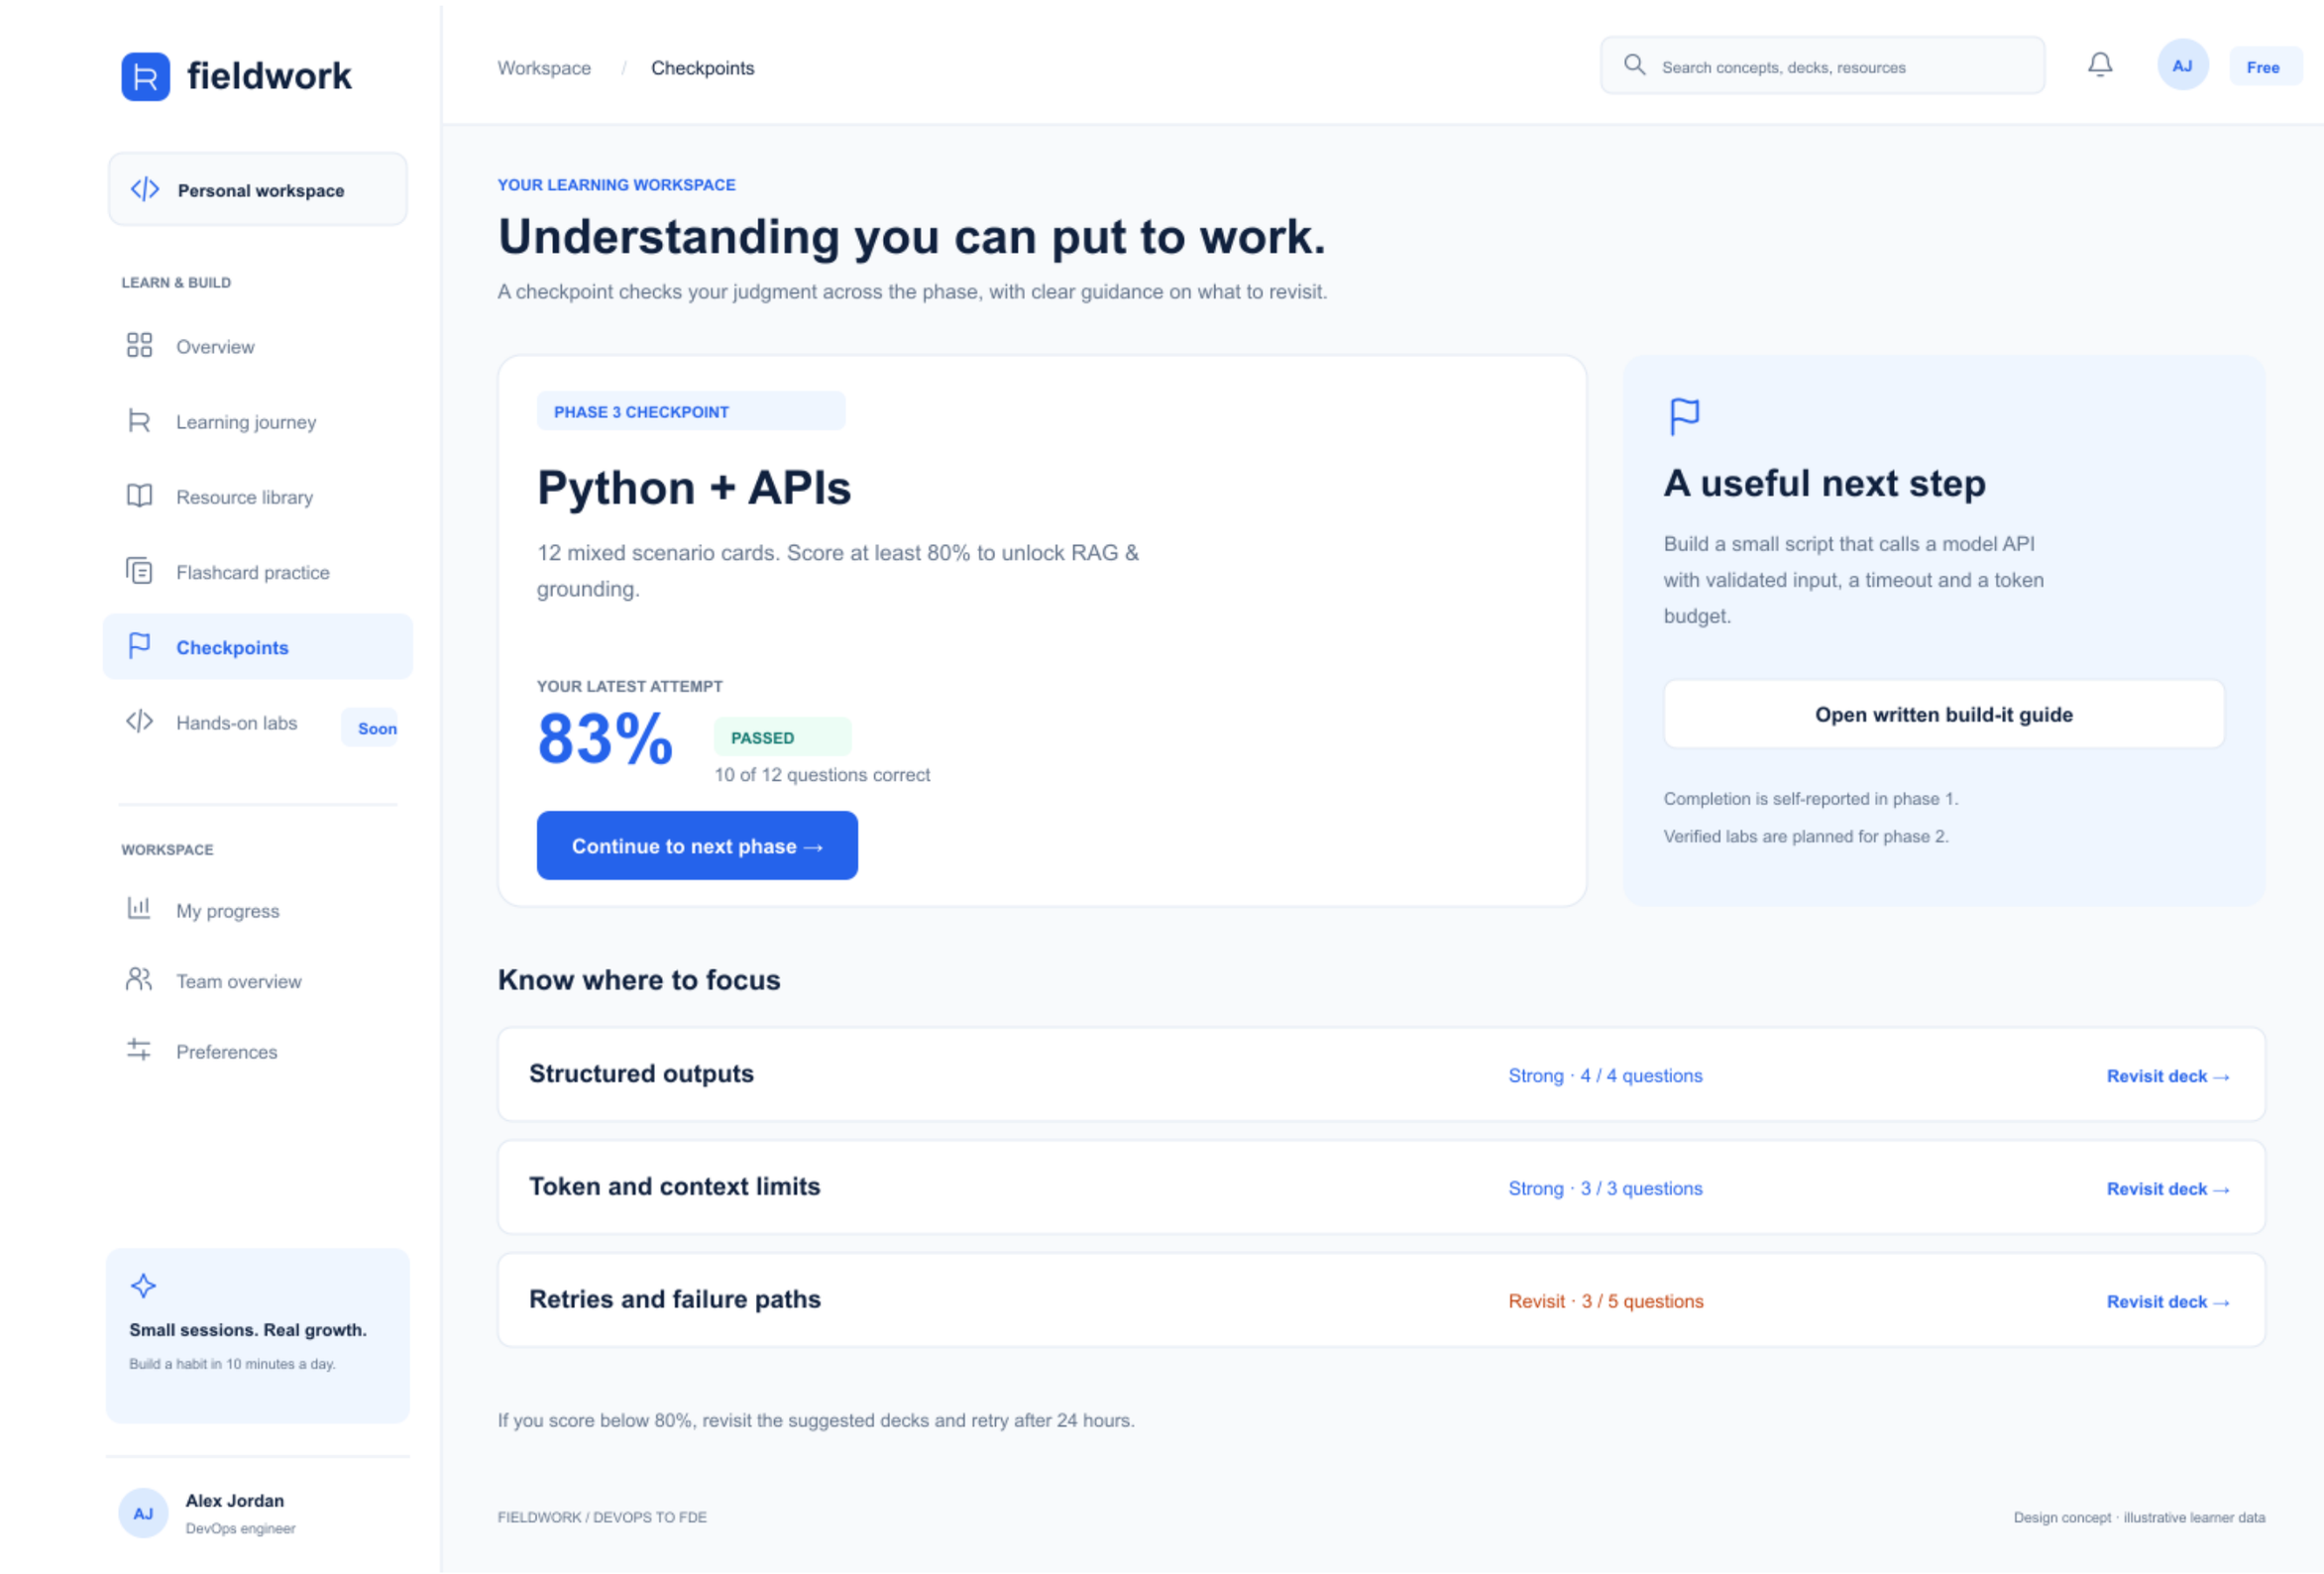

12 / Practise sequence and tradeoffs

Ordering and choice cards are app-graded: correct maps to Good, incorrect to Again.

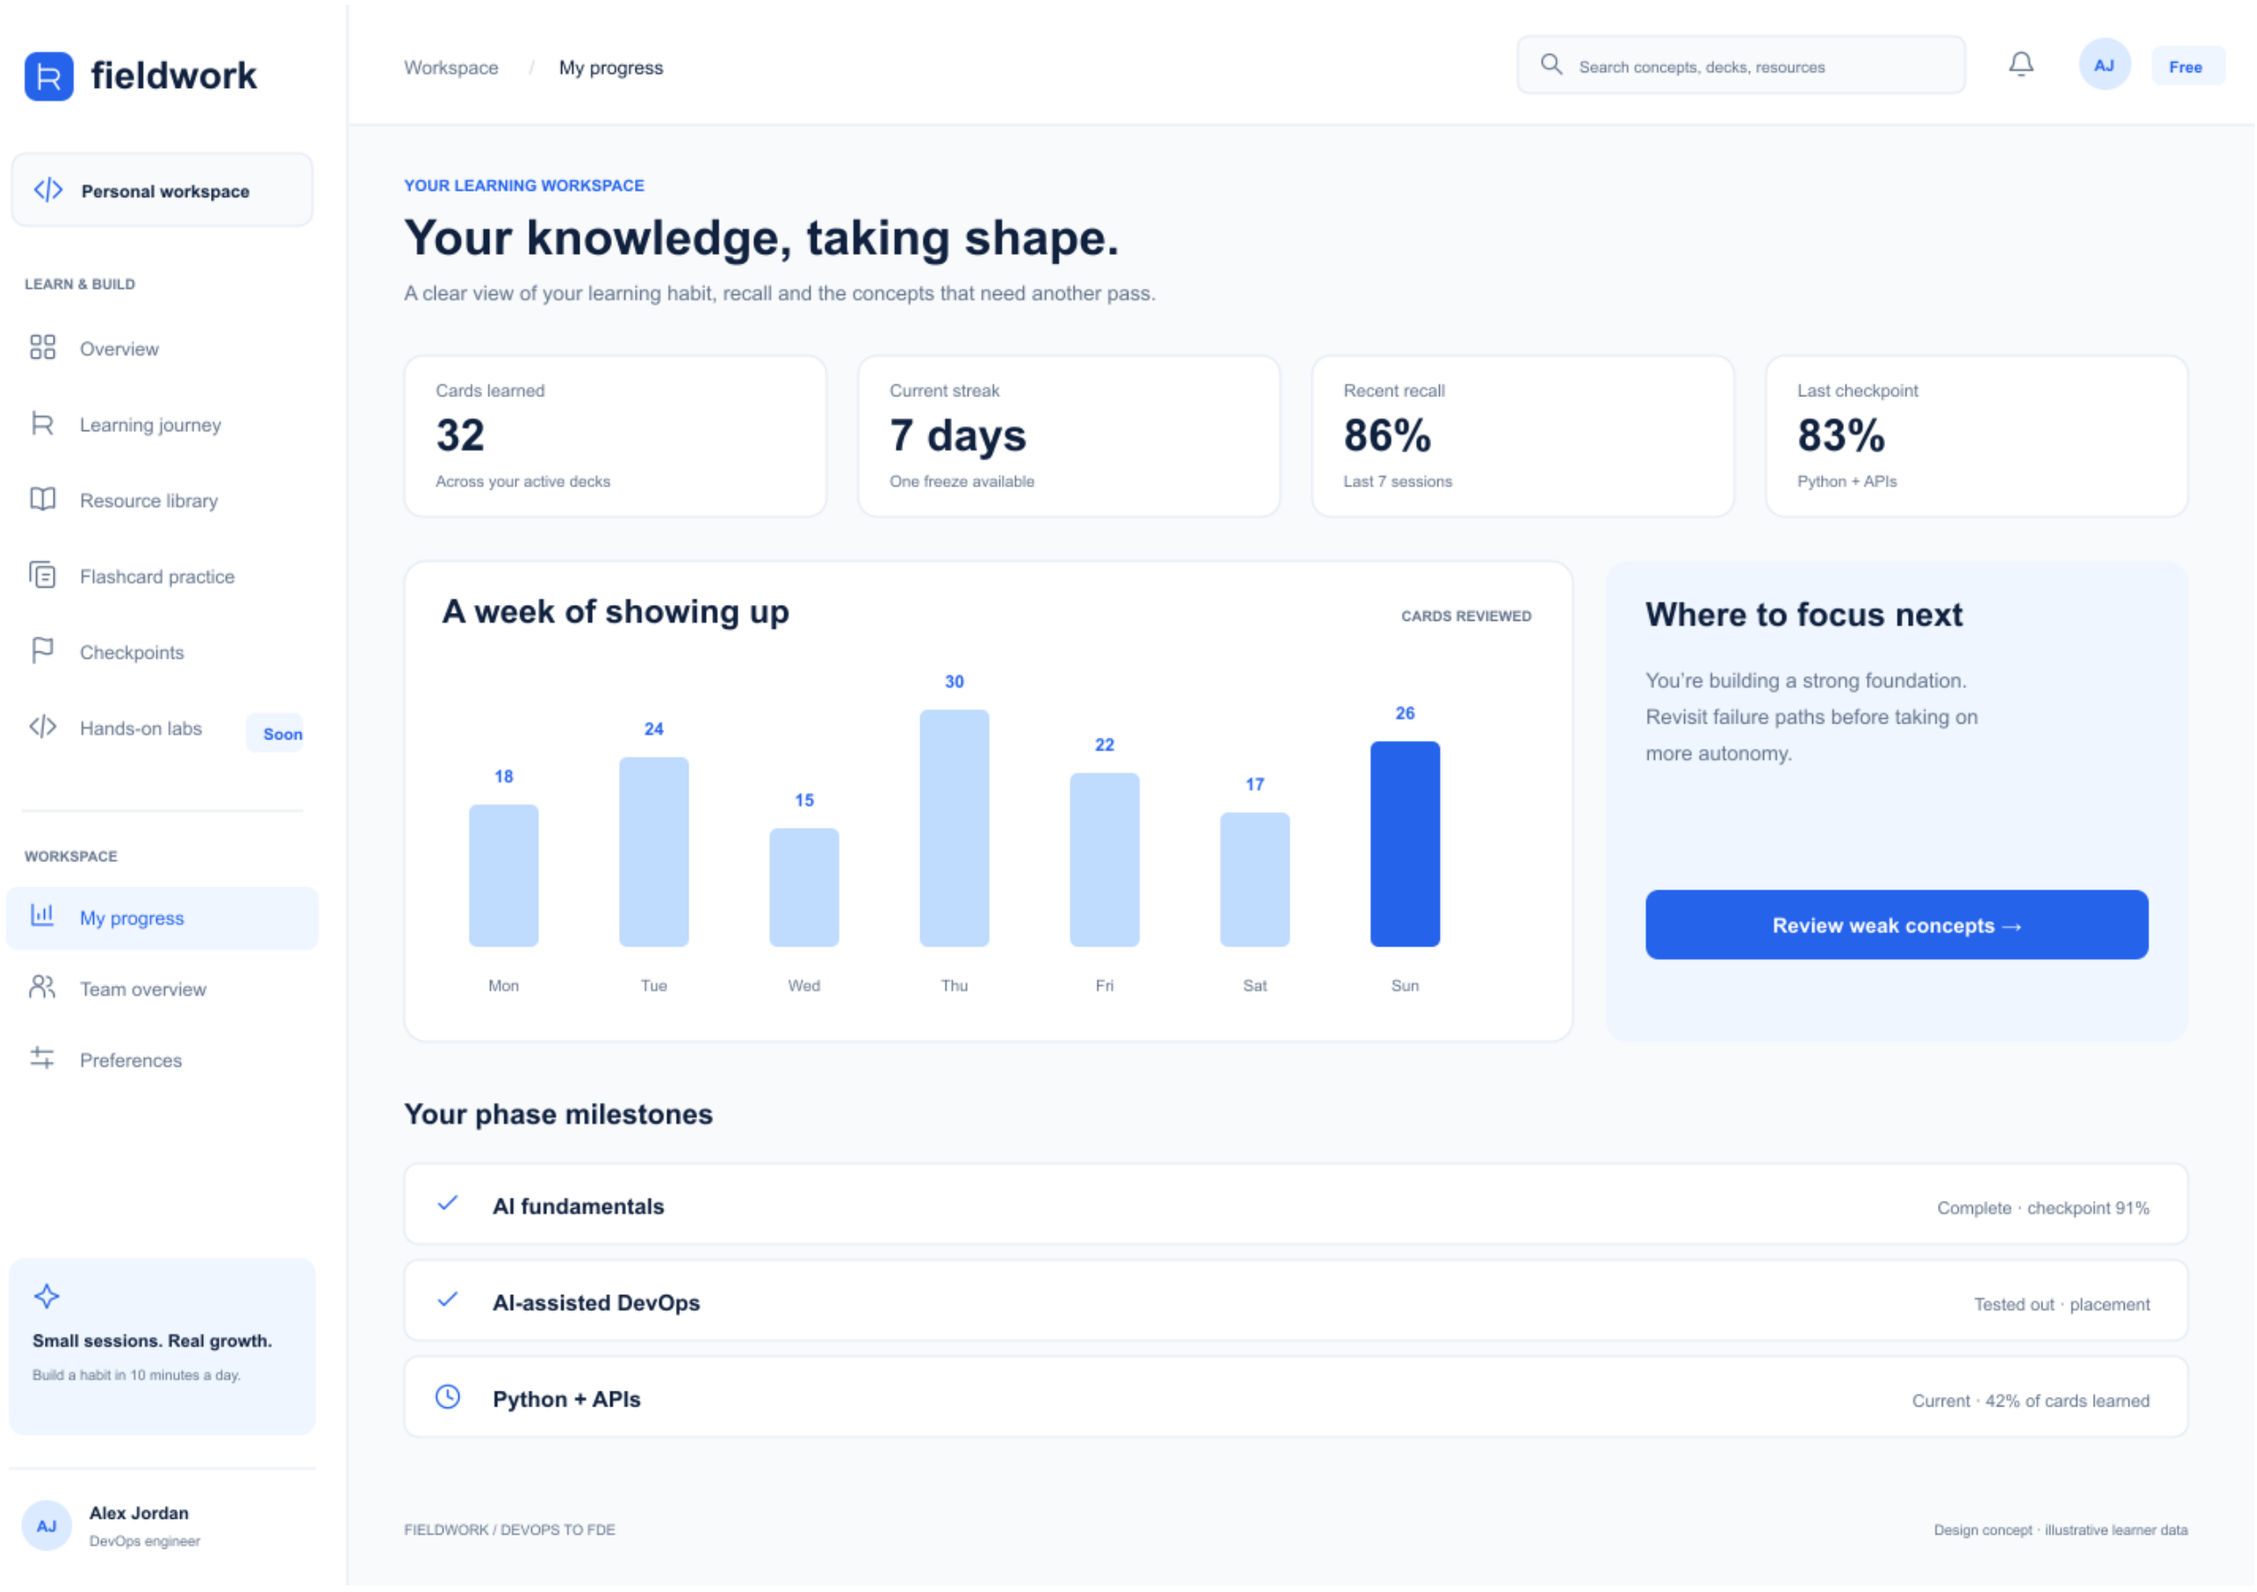

13 / A checkpoint with a useful next step

An 80% pass unlocks the next phase. Below that, revisit weak decks and retry after 24 hours.

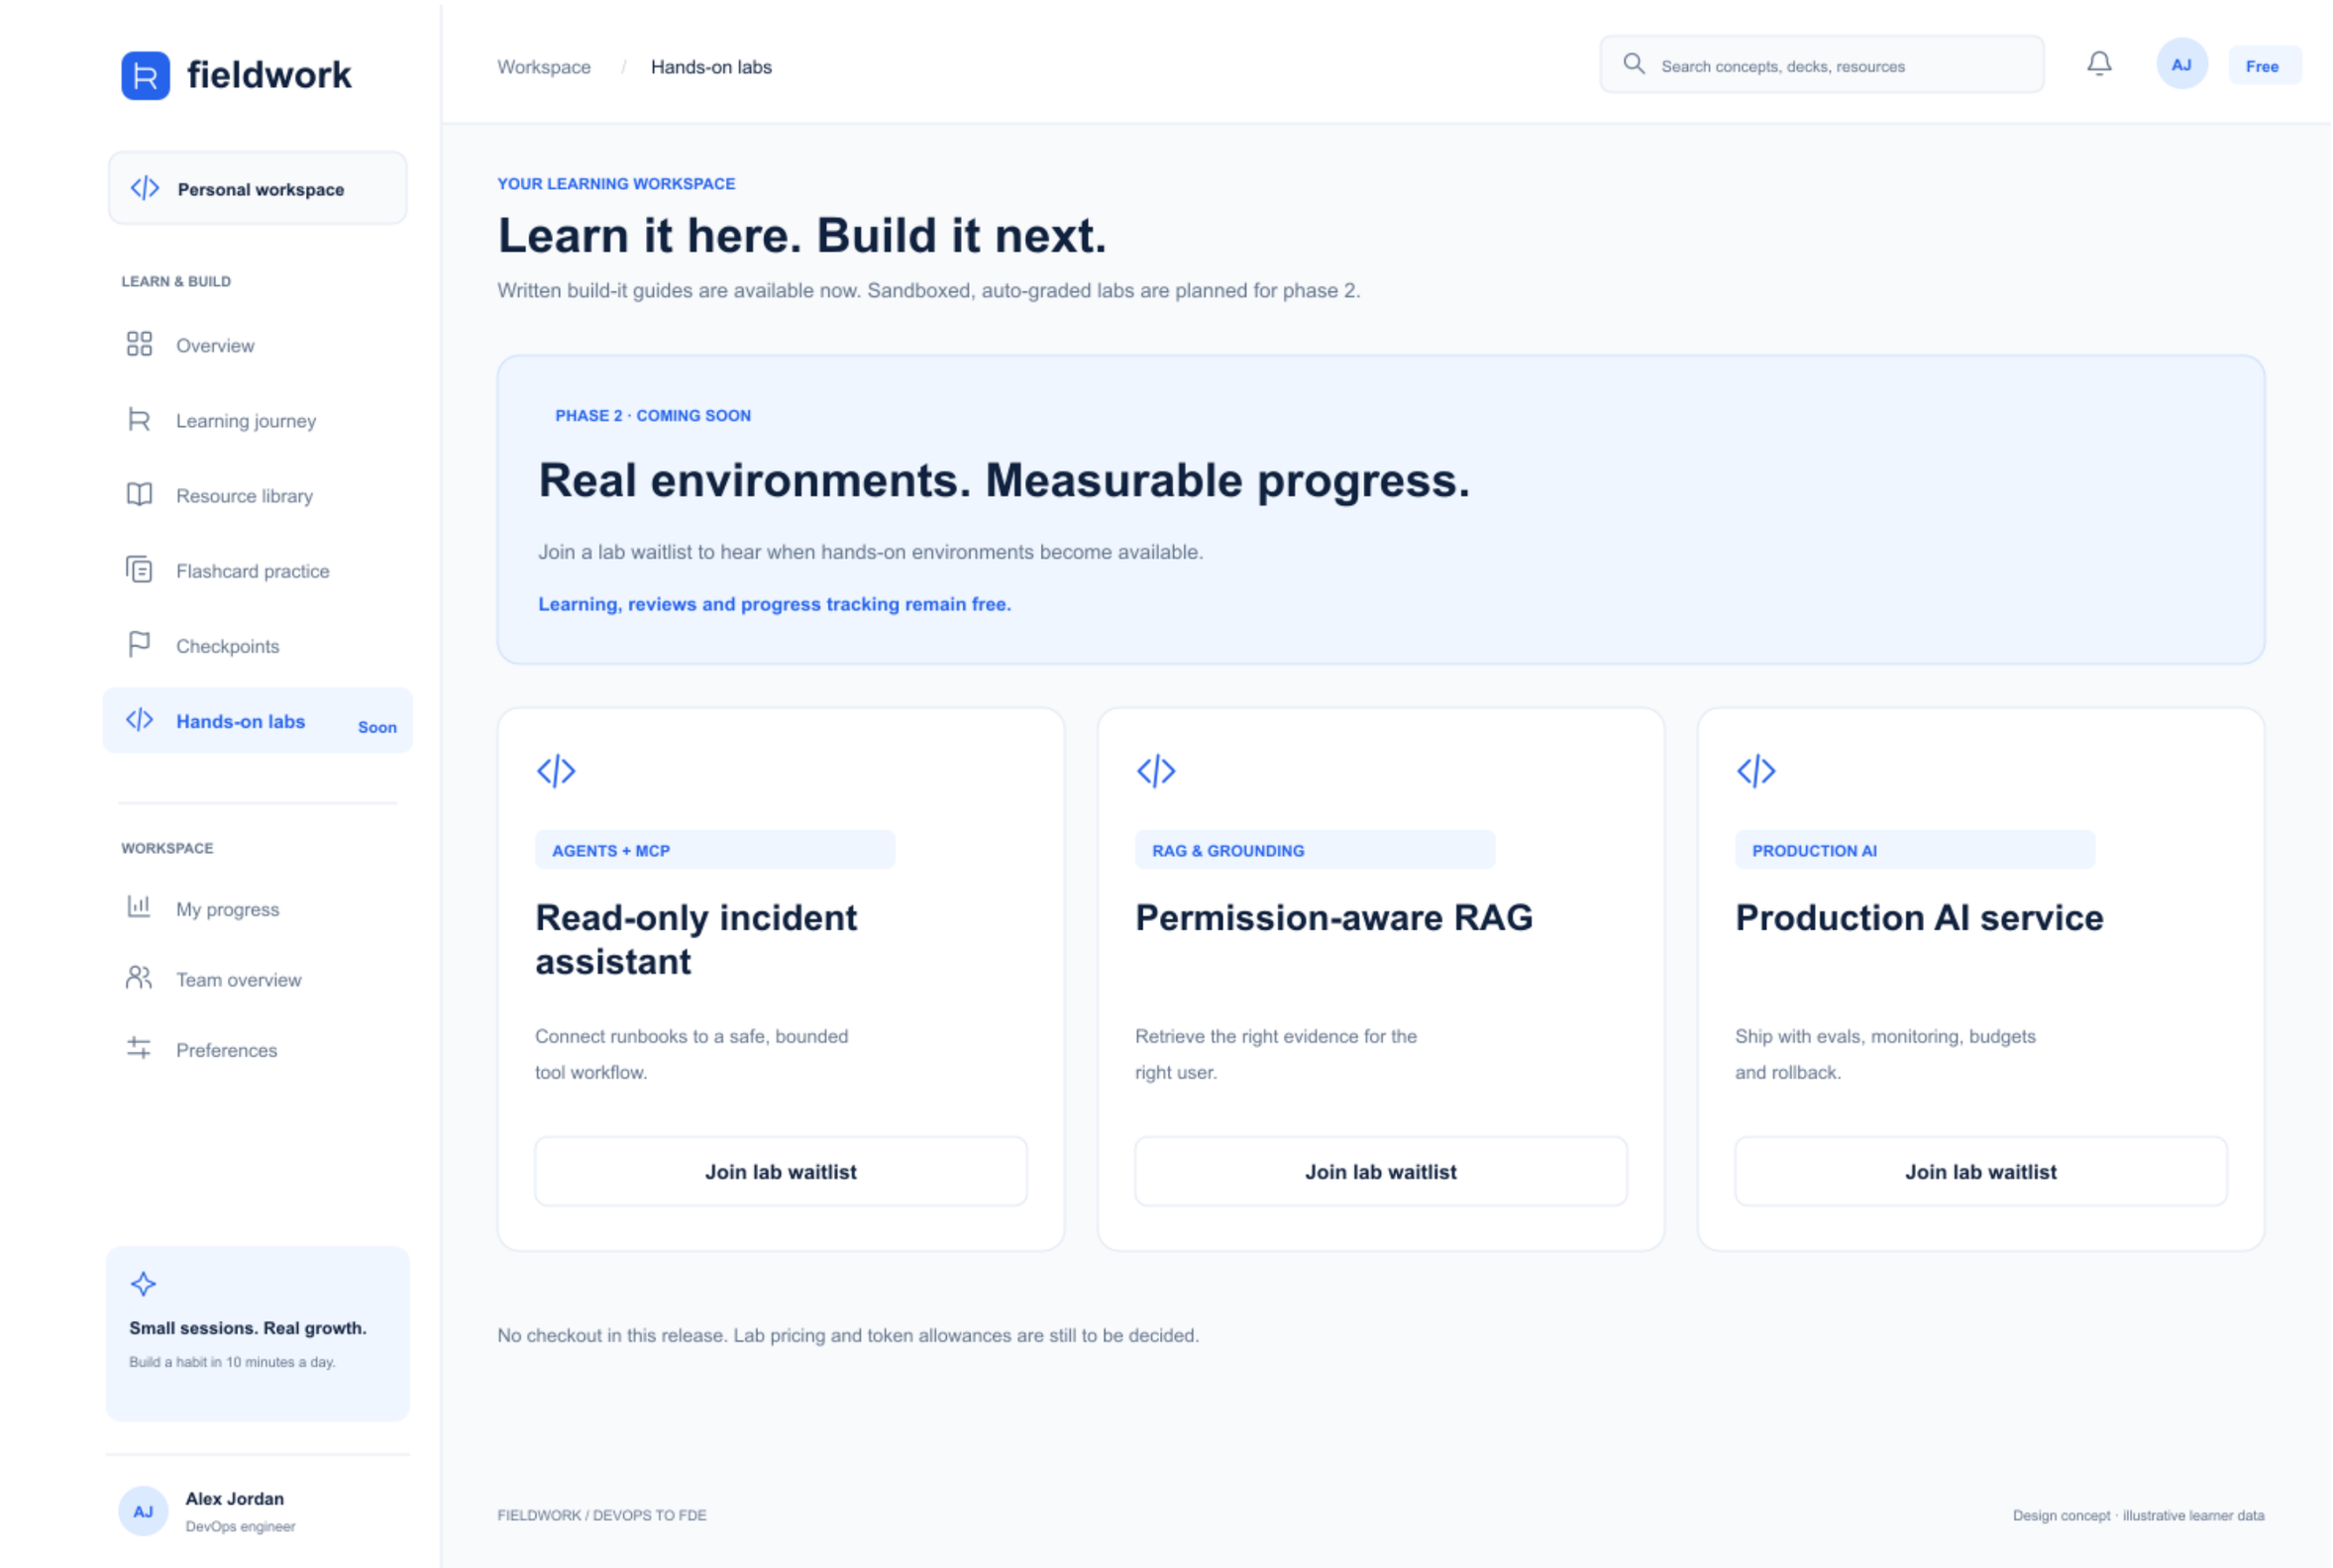

14 / Progress with practical meaning

See recall, streaks, phase milestones and where another review will help.

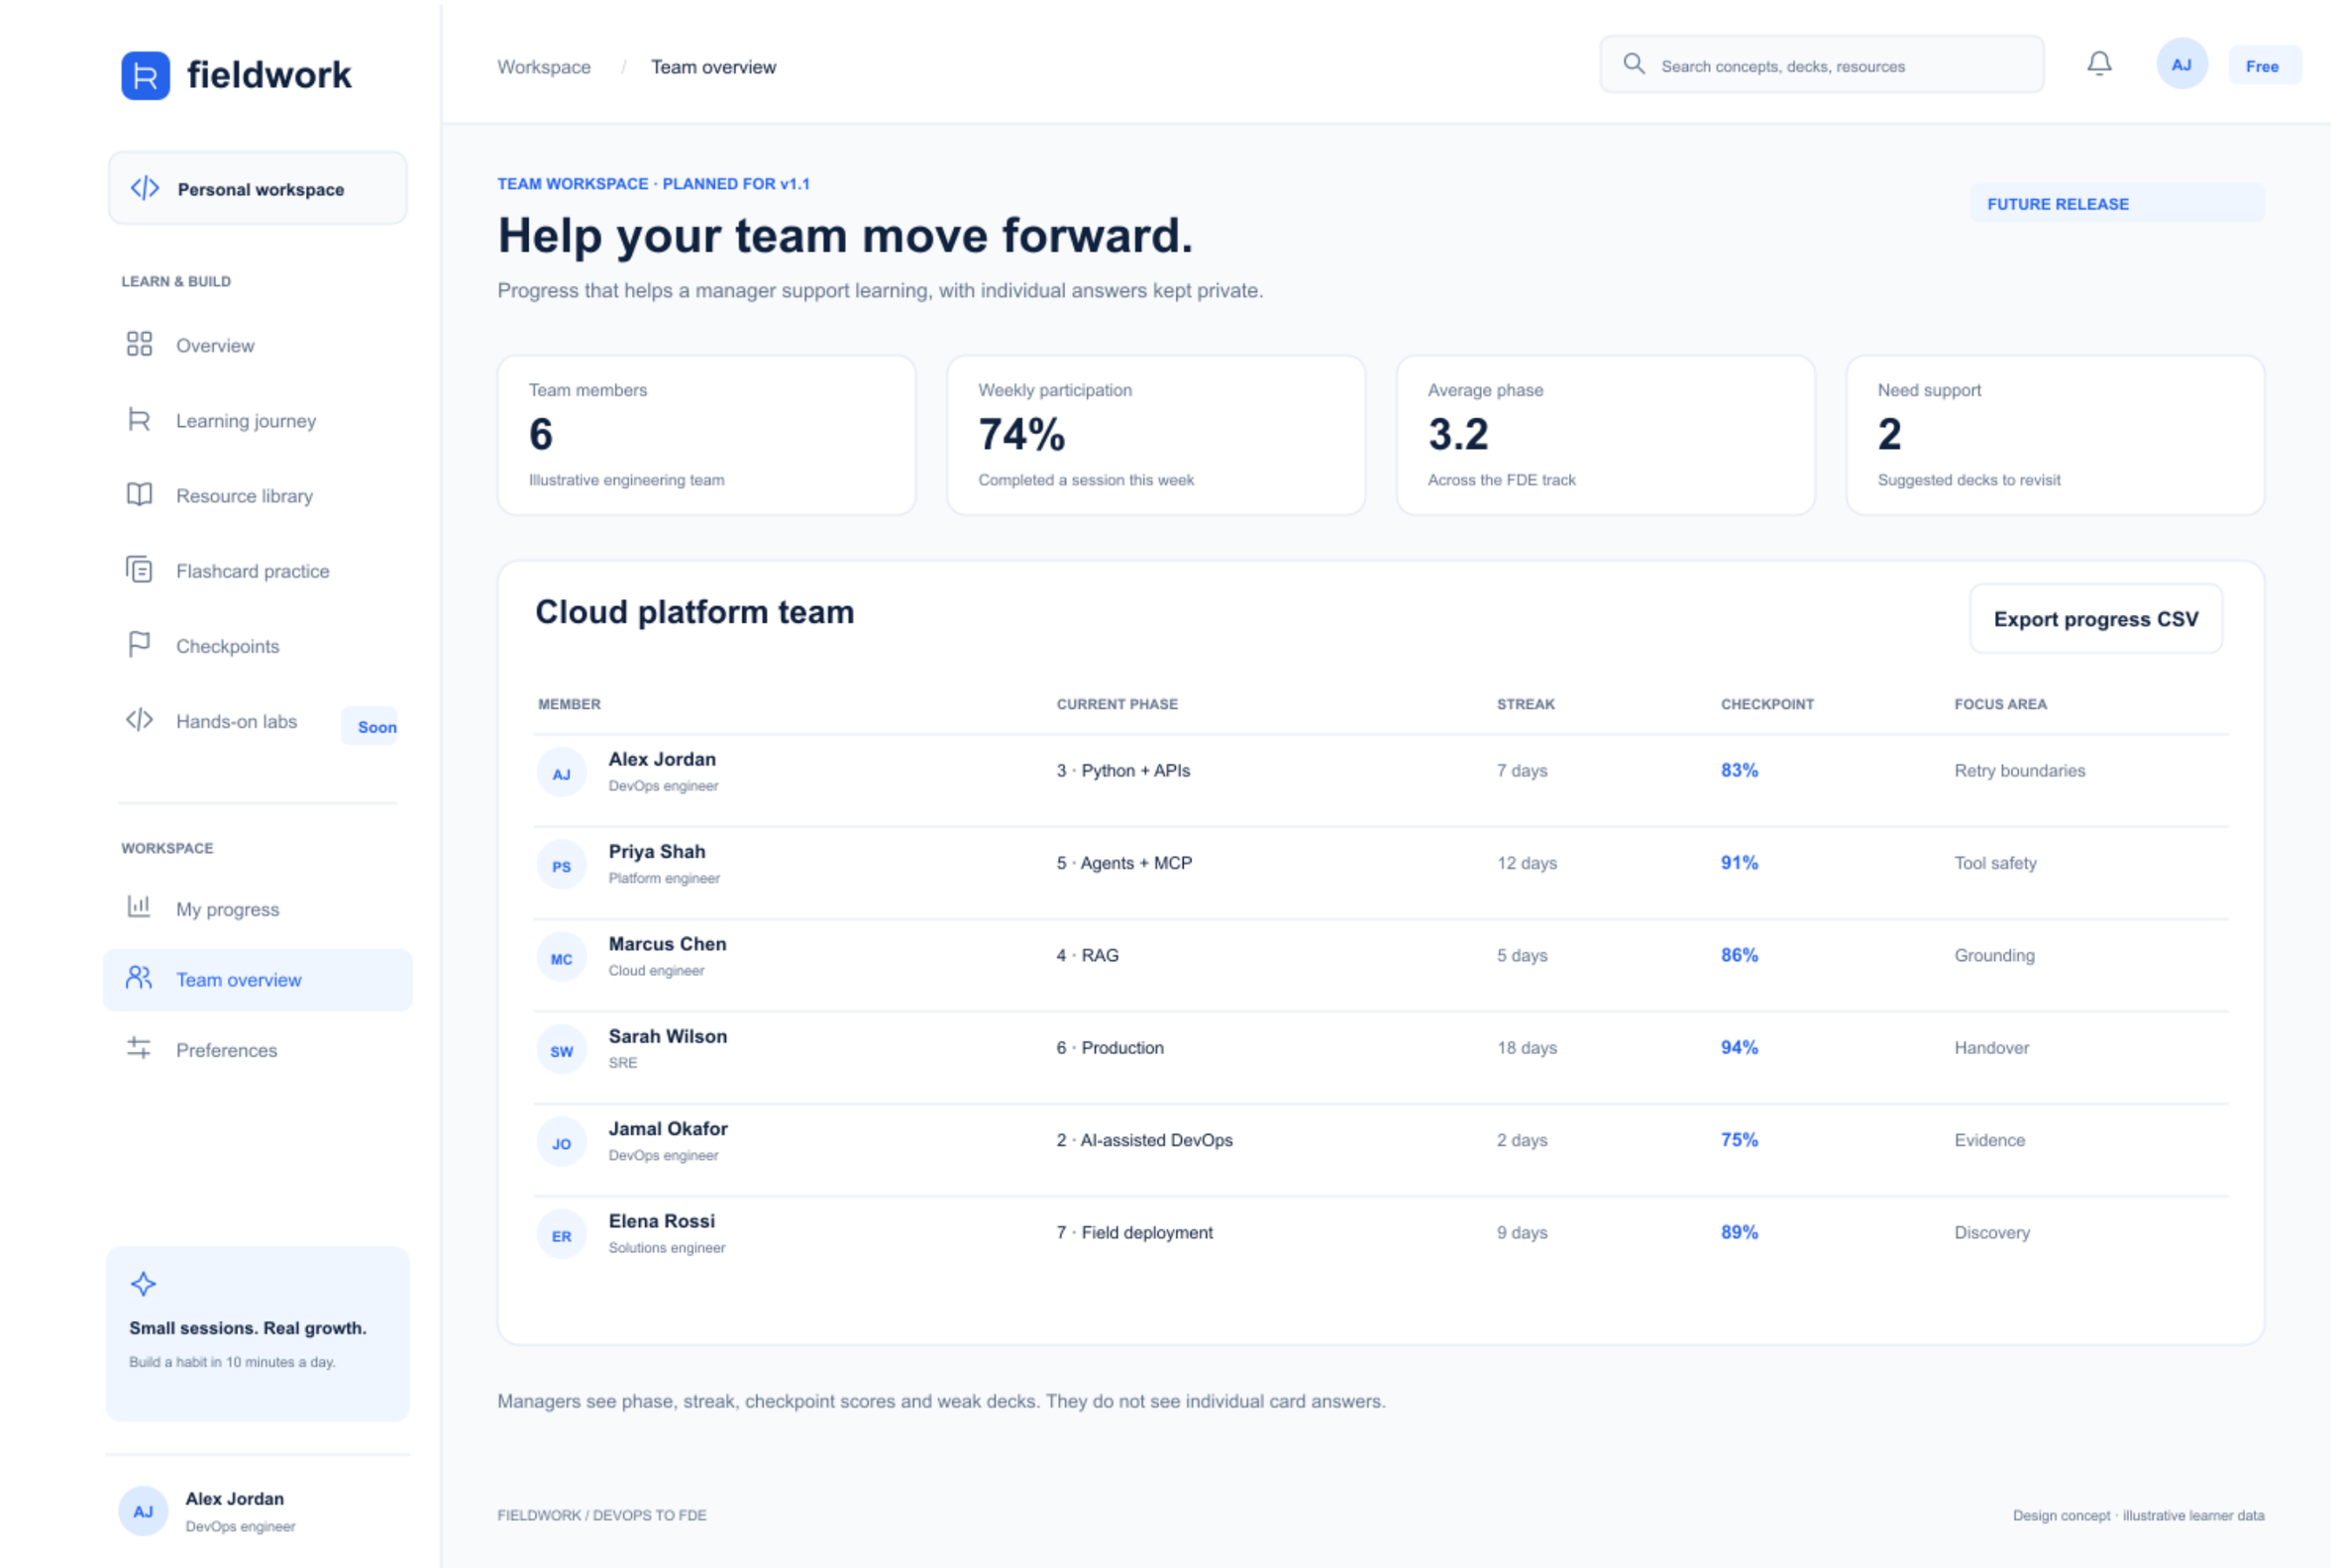

15 / Free learning, future hands-on labs

Build-it guides now. Sandboxed, auto-graded paid labs later. No checkout in this release.

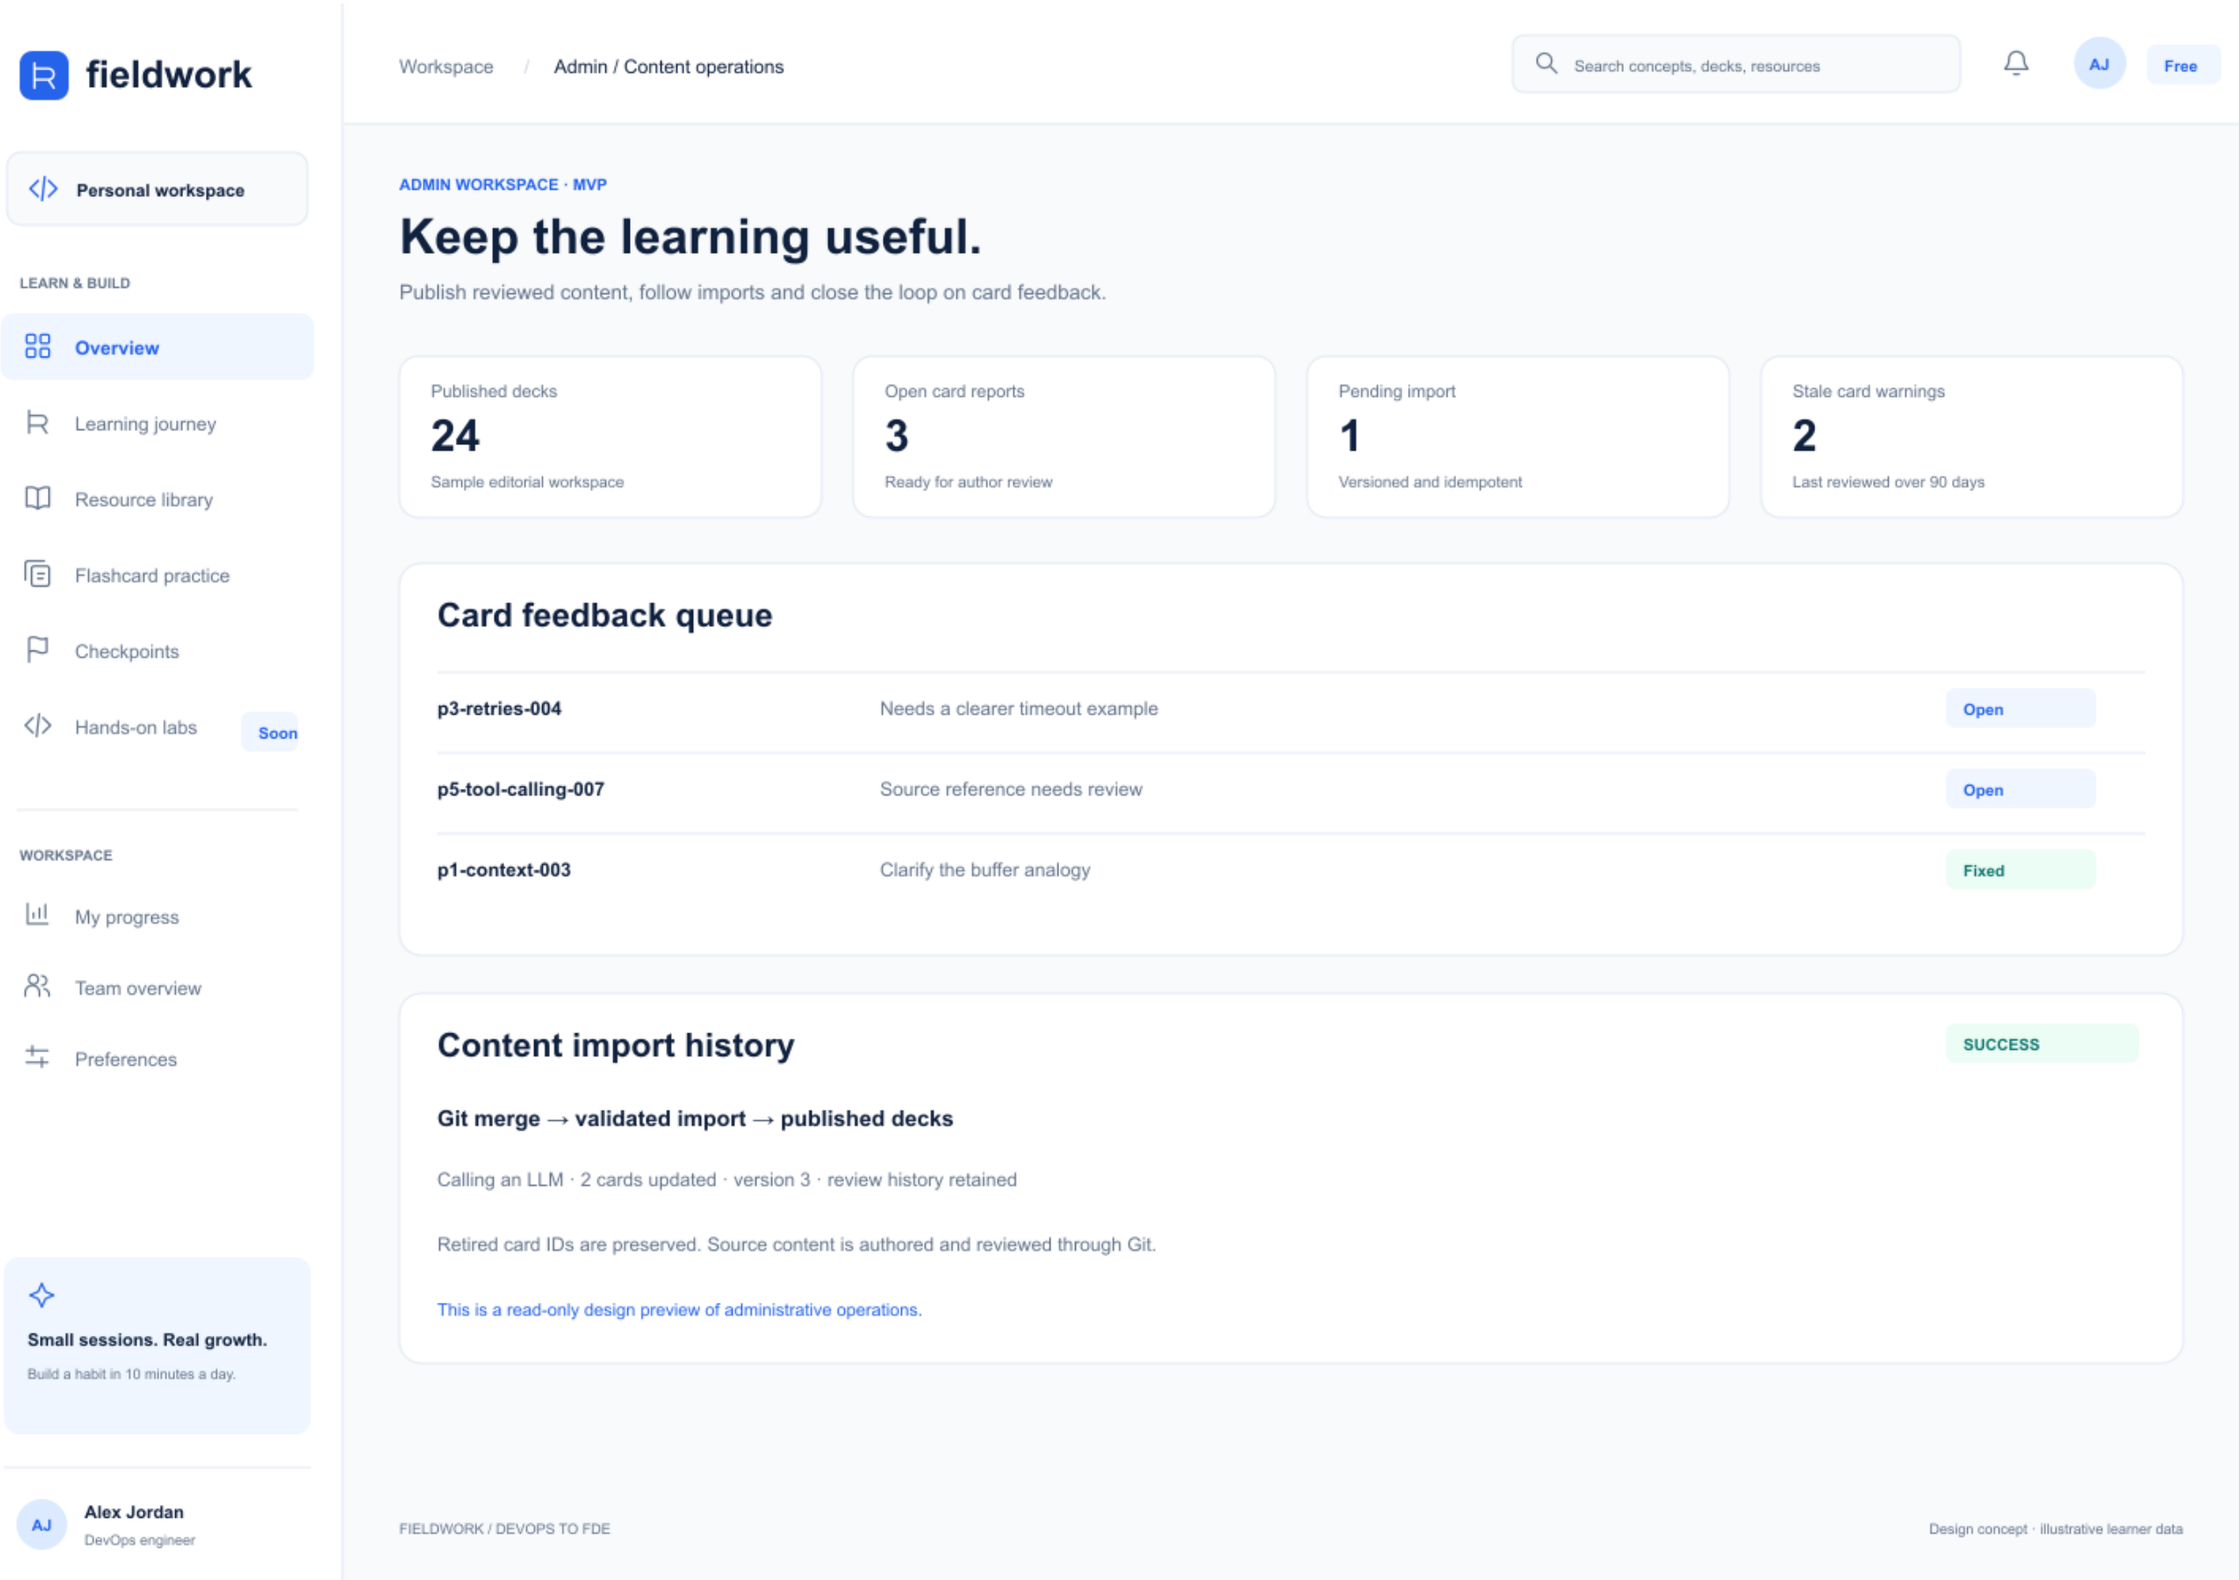

16 / Teams, planned for v1.1

Managers see progress summaries and weak decks. Individual card answers remain private.

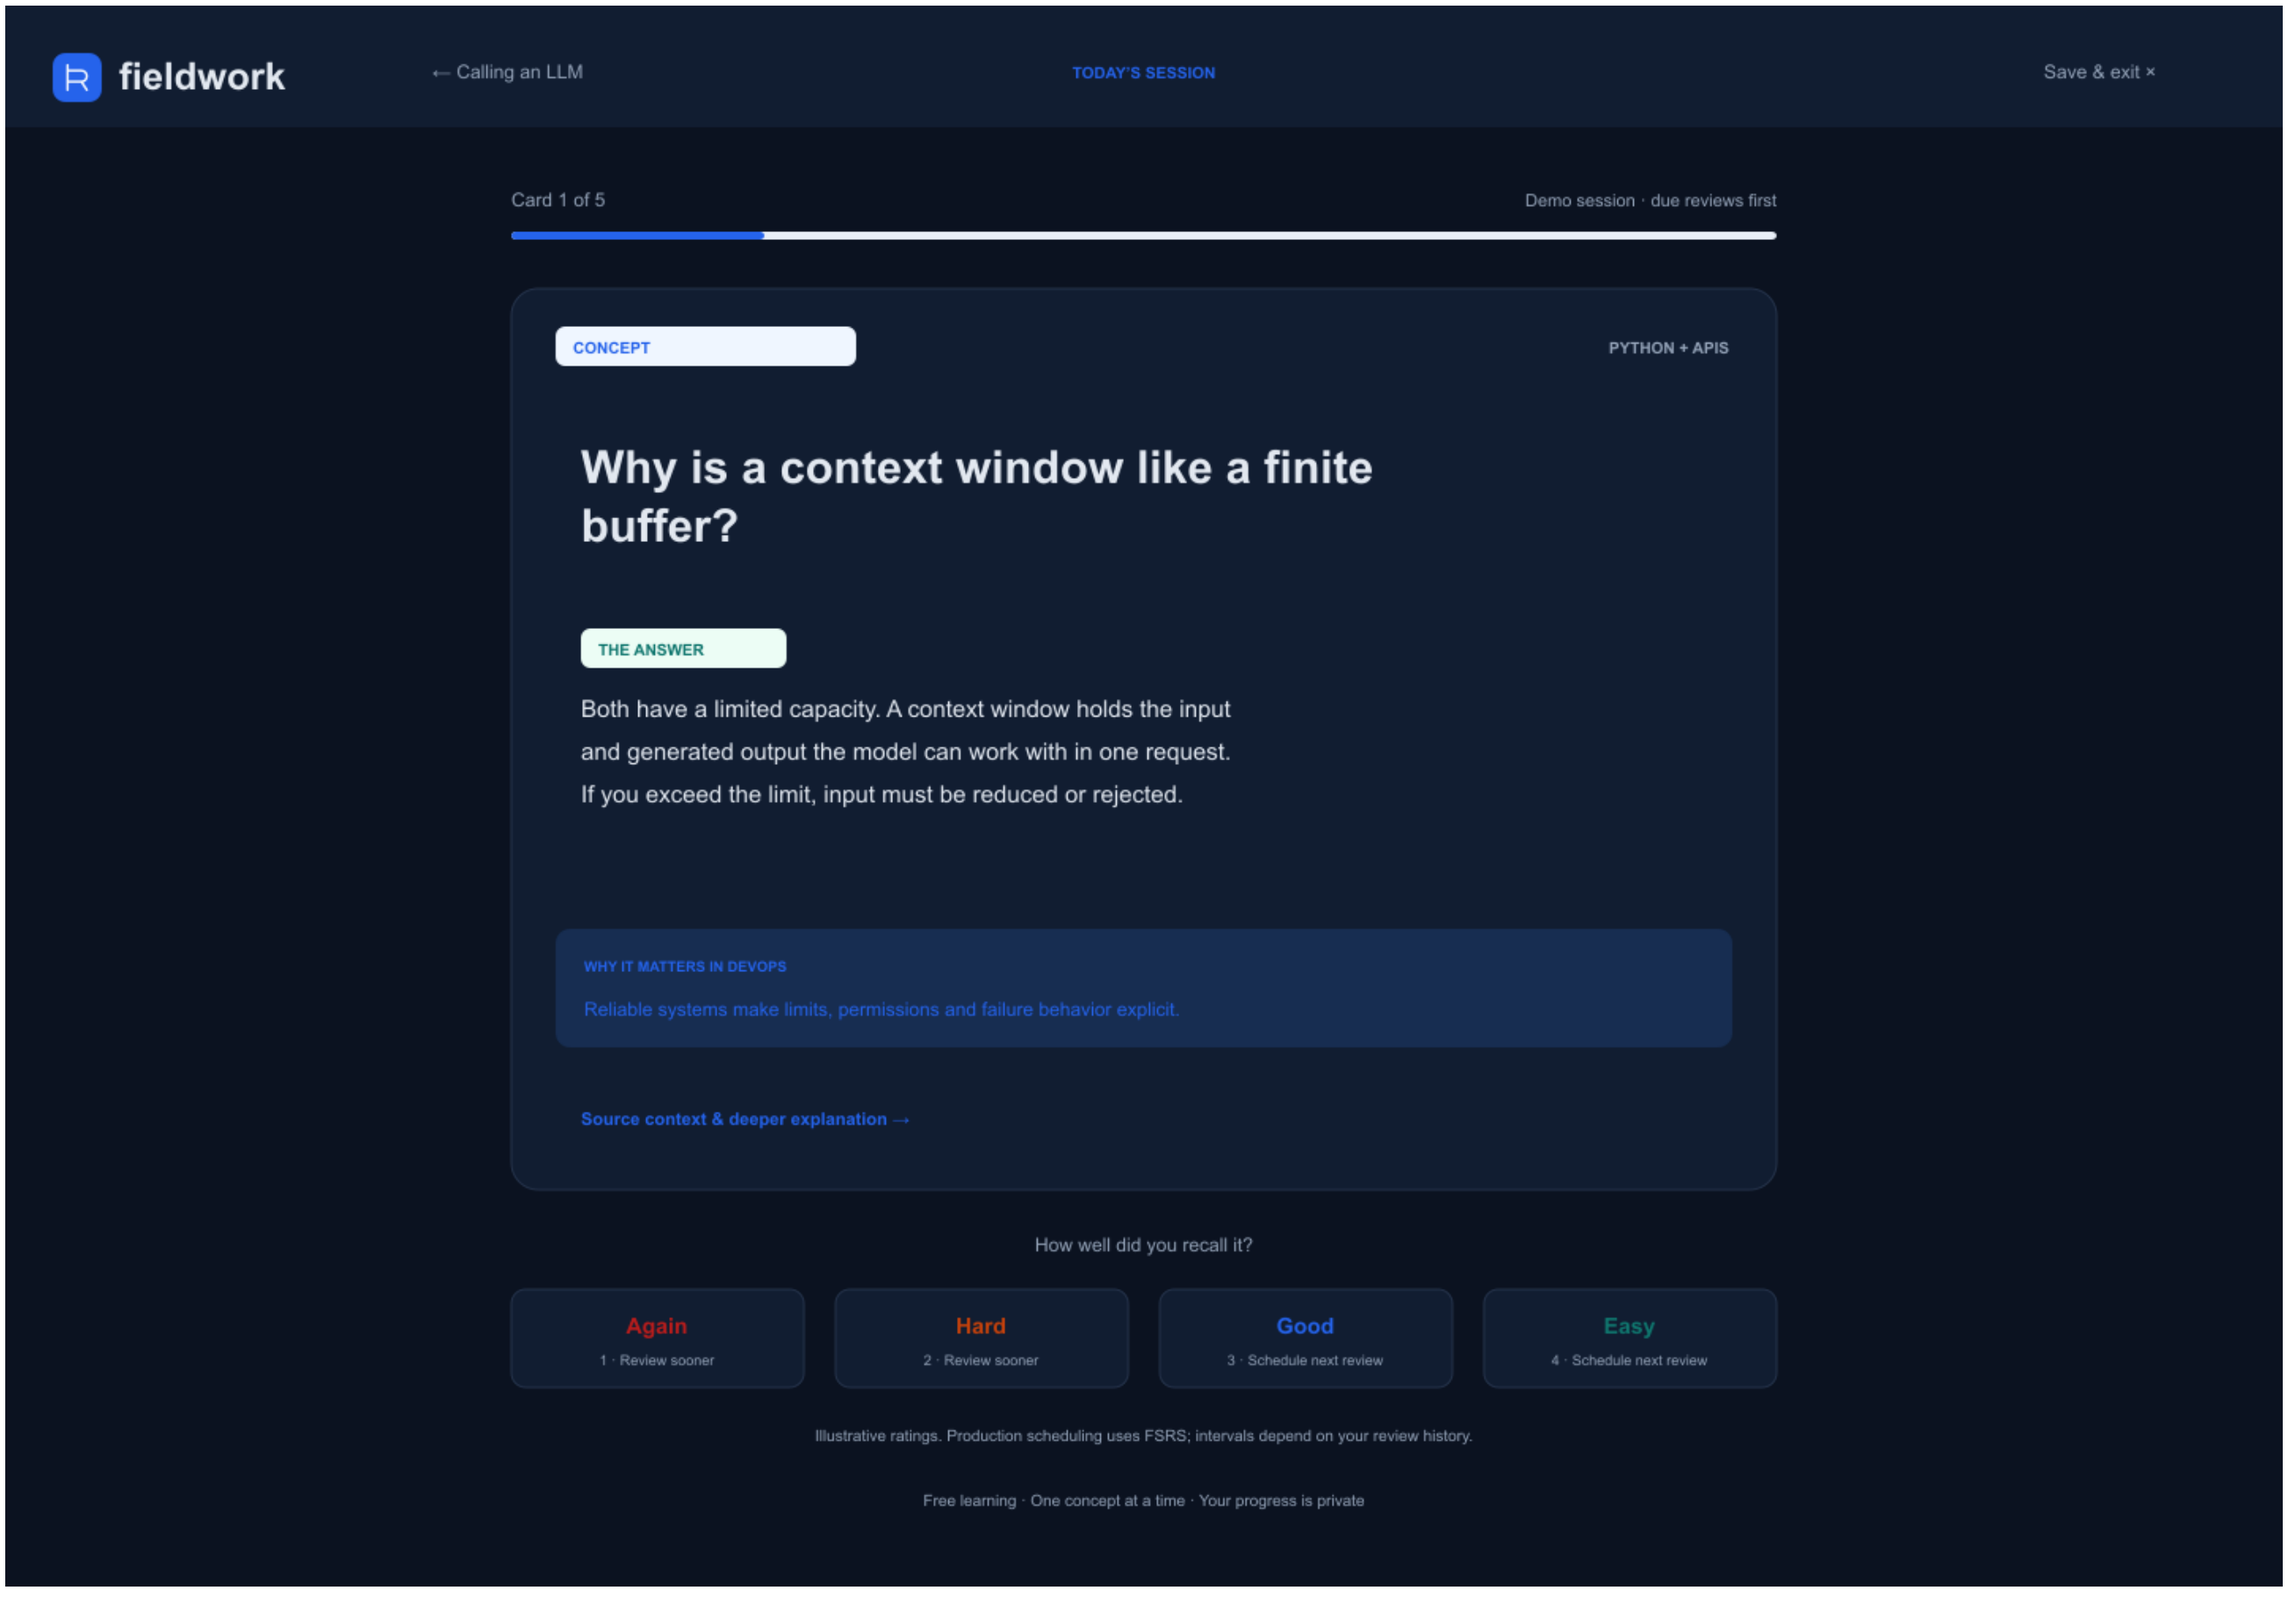

17 / A reviewed content pipeline

Card reports, imports and publication states support author review through Git.

18 / Comfortable review, day or night

A dark review example preserves readable explanations and blue actions.

19 / Retainzy blue, consistently applied

Verified colors and typography, with reusable spacing, action and state conventions.

fieldwork

DESIGN FOUNDATIONS / 01

Familiar blue. Clear thinking.

Retainzy's verified palette and type, adapted to a focused engineering learning workspace.

Layout & interaction

Desktop 1440 px · sidebar 234 px · content padding 36 px

Mobile 390 px · 16 px margins · 44 px minimum actions

Spacing 4 / 8 / 12 / 16 / 24 / 32 · radii 8 / 12 / 16

Keyboard: Space to reveal · 1–4 to rate · visible focus

Write for the engineer you're helping.

Connect a new idea to an existing mental model. Explain why a decision matters in production. Keep source context close, and turn the next step into a useful action.

20 / A useful learning moment, anywhere

Dedicated 390 px review layouts with large reveal and rating actions. The full workspace remains a desktop design.
